

Building apps for Microsoft SharePoint and OneDrive

Integrate and extend with your application experience

Agenda

Microsoft SharePoint and OneDrive
overview and opportunity

Extensibility scenarios

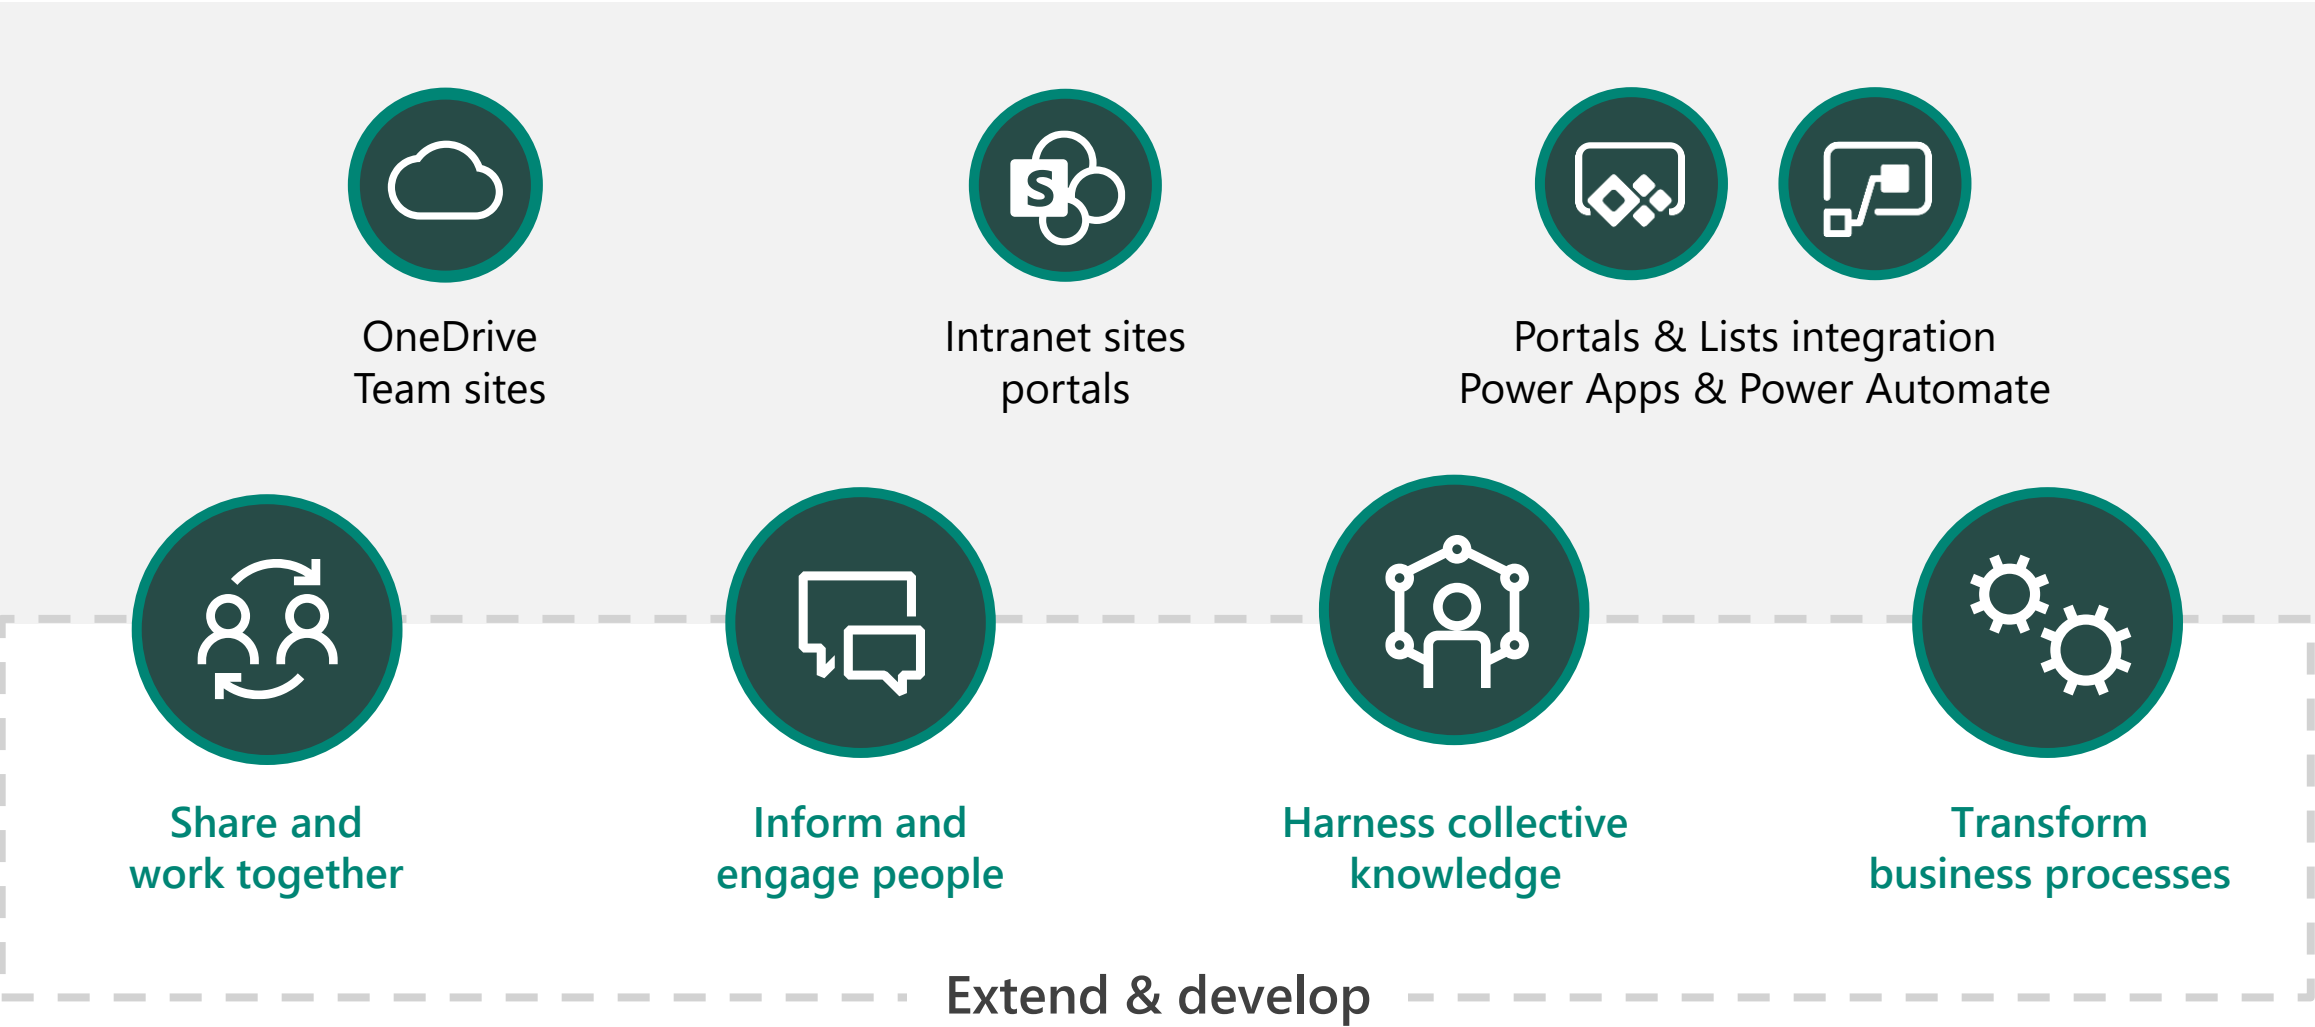

- Files
- Lists
- SharePoint Framework (SPFx)
- Deployment and configuration
- Open source

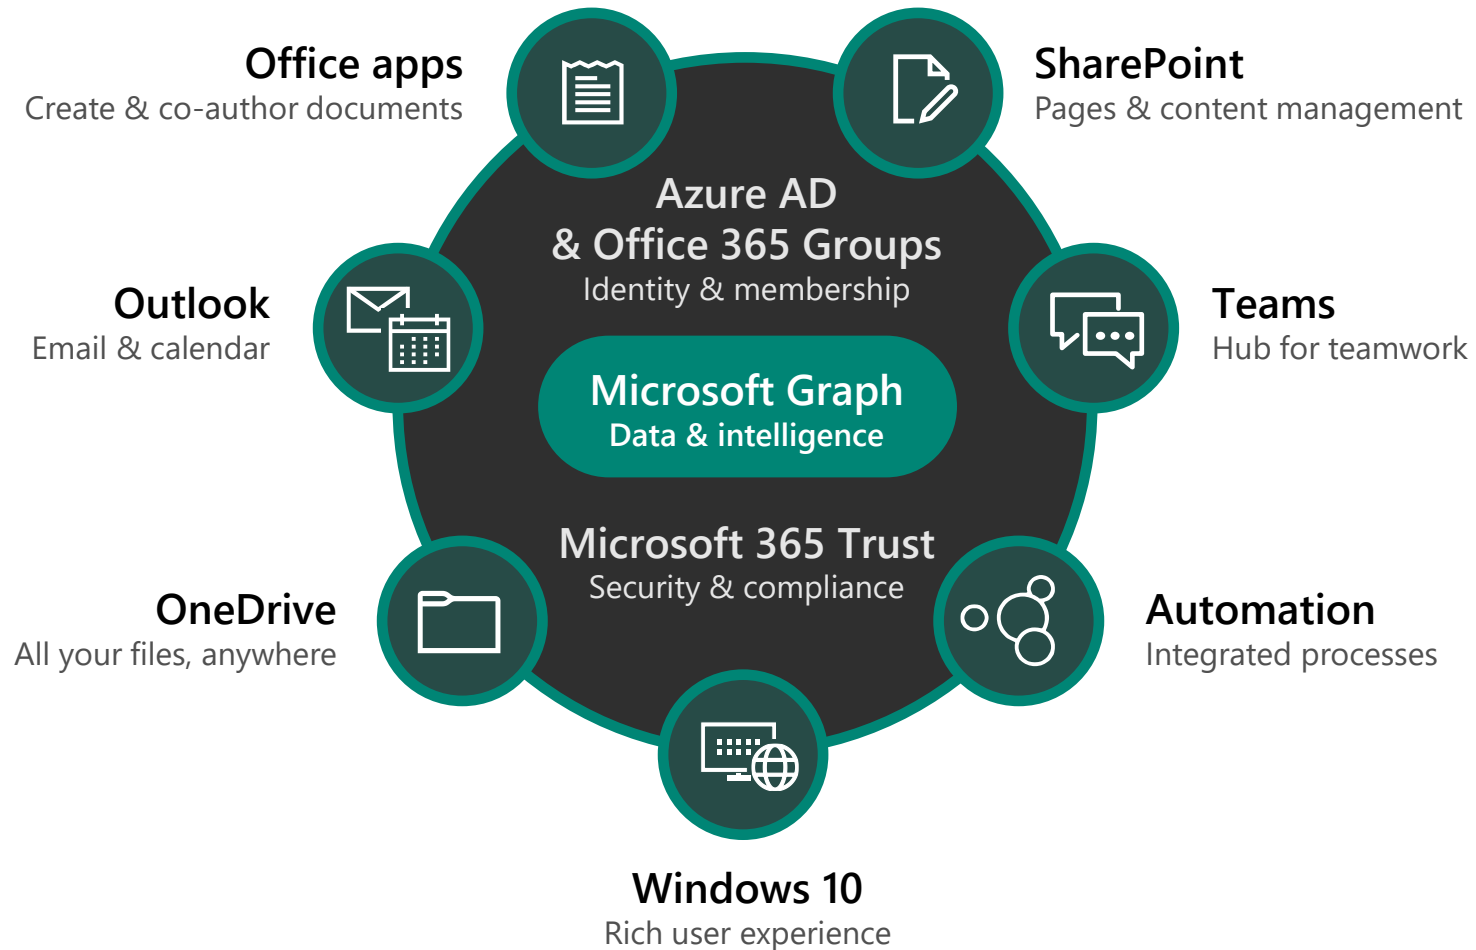

Partners building with SharePoint and OneDrive

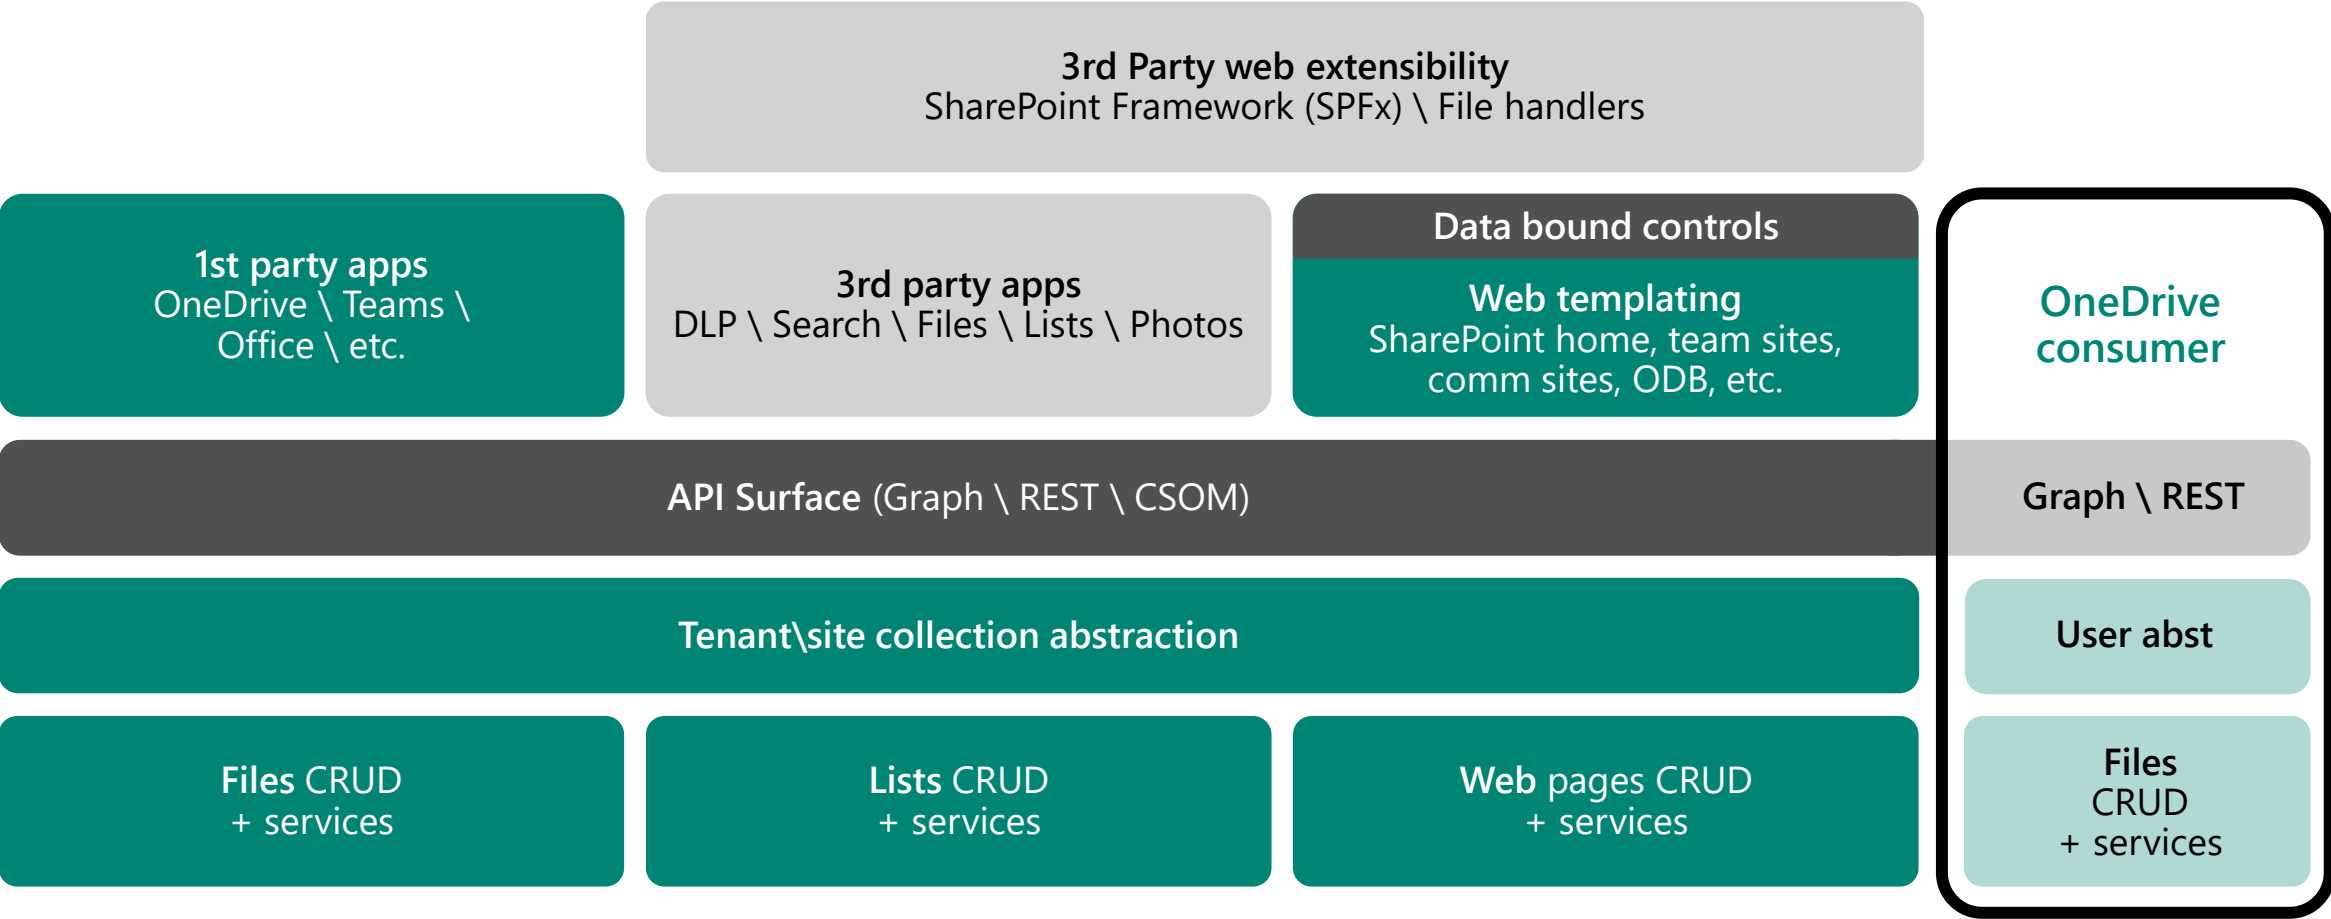

SharePoint and OneDrive

Microsoft 365 extensibility foundation

SharePoint & OneDrive functional design

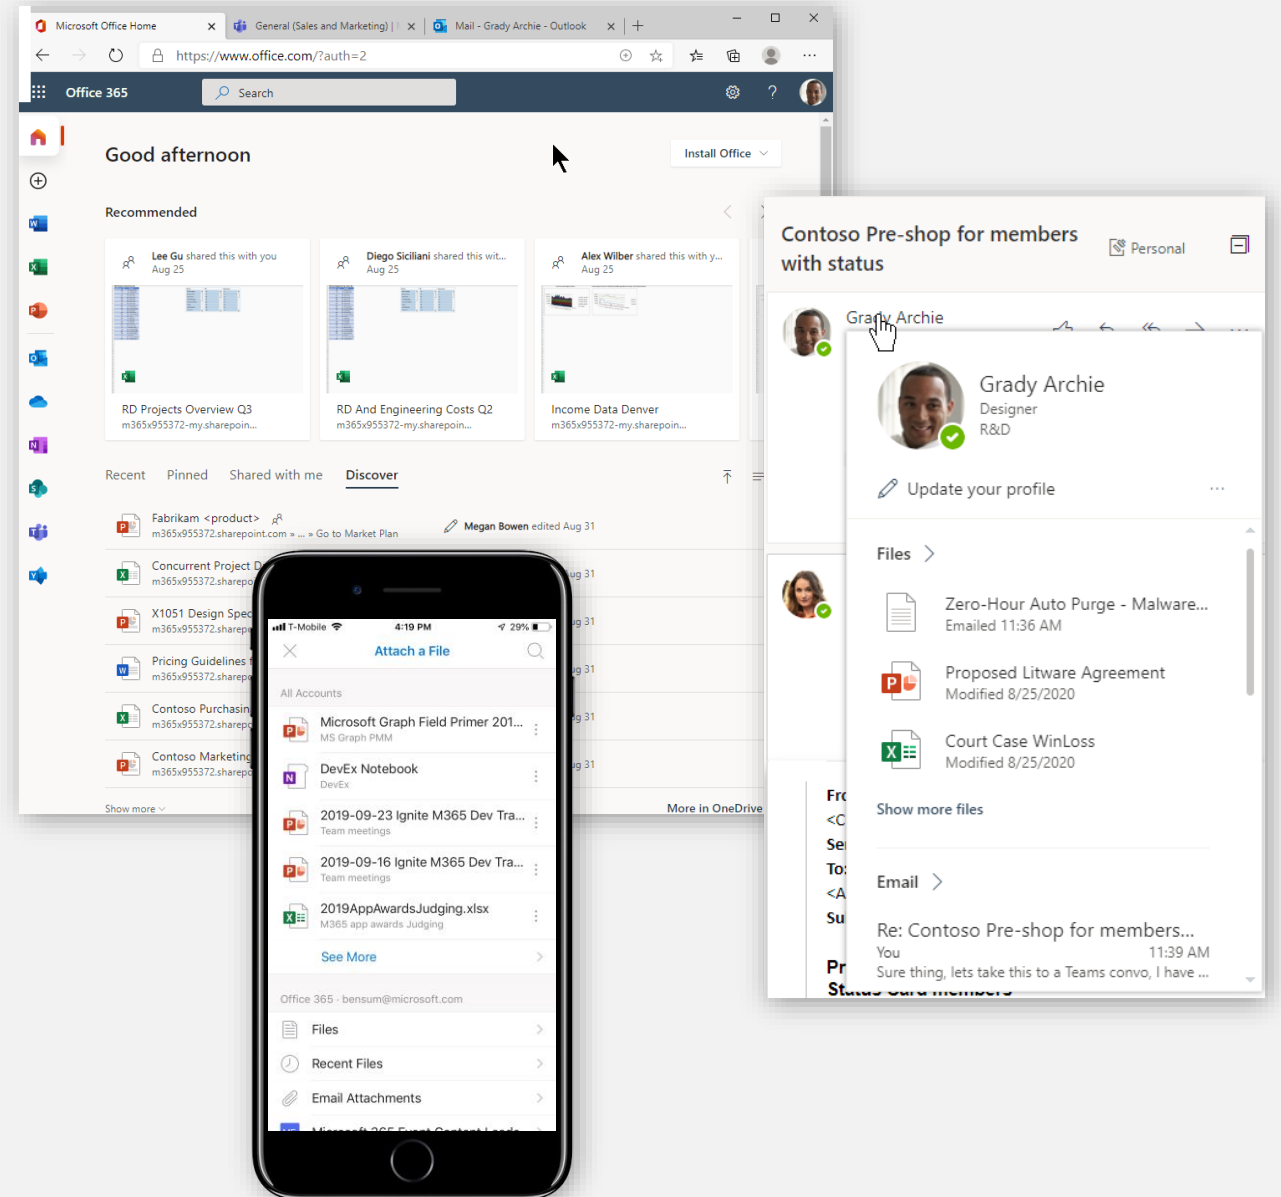

Files extensibility scenarios

An overview of the extensibility options when working with files in SharePoint and OneDrive

Files

- File preview
- No additional infrastructure for hosting
- Maintain a focus on your app while we do the rest
- Government and industry compliant

Improved turbocharged SharePoint file storage

10X

faster downloads

3X

performance

30x

faster indexing

320+

file types

← AI-powered insights — Intelligent security — Innovative experiences →

Viewing, selecting
and uploading files

Deep integration
via API's

Owning my
file types

Selecting files

Control allowing file browsing and picking

File Open mode: allows for file downloads via direct download link, file id's (for API access) or read-only sharing link

Implementation

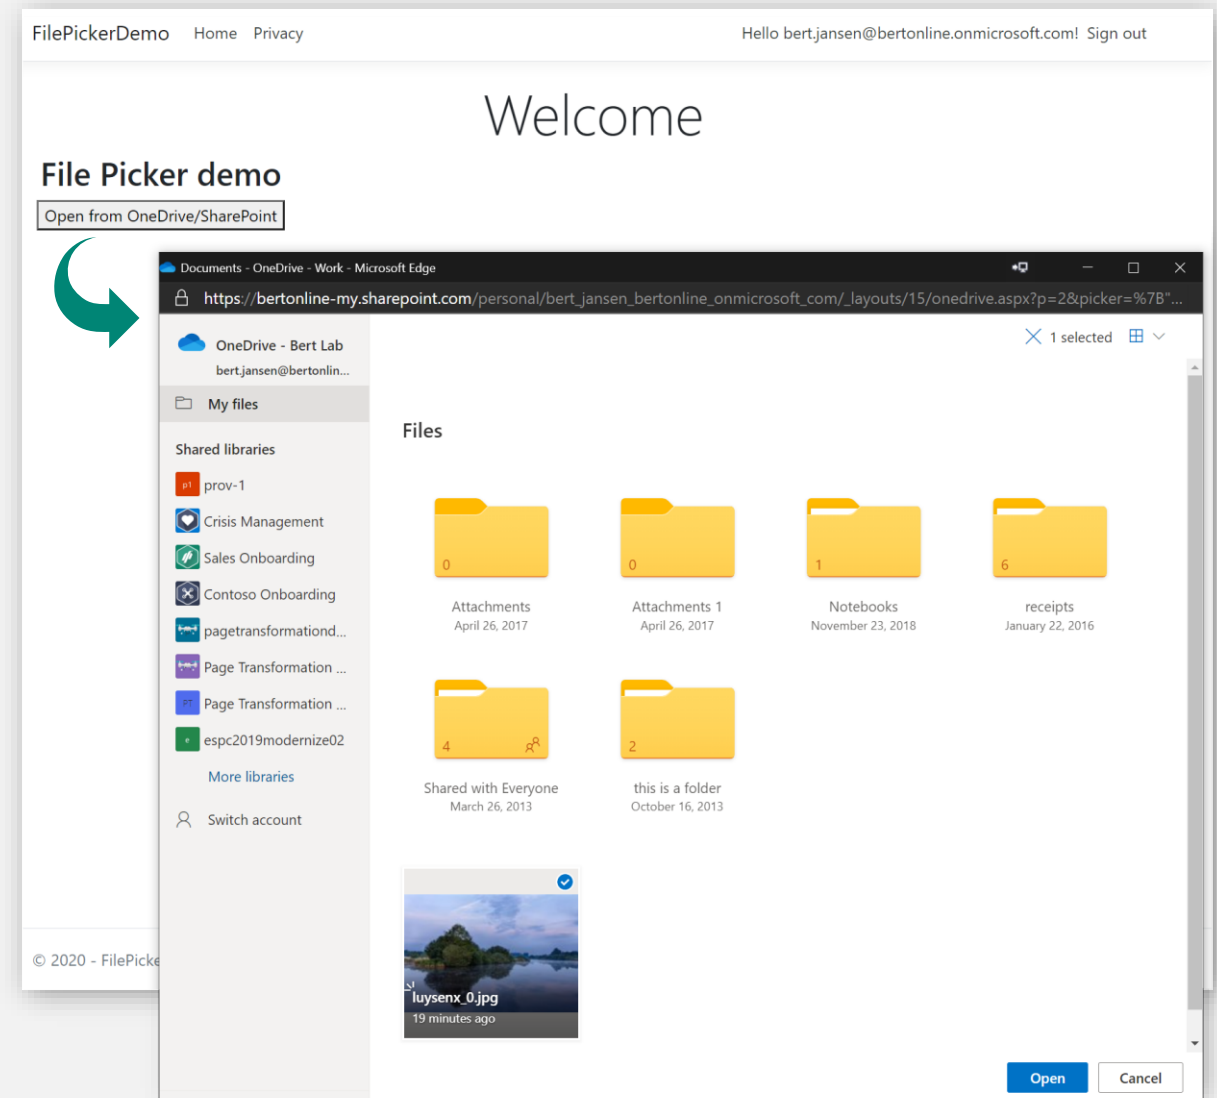

JavaScript library: <https://js.live.net/v7.2/OneDrive.js>

Resources

[Opening files documentation](#)

[SPFX sample](#)

A new picker experience is in progress

Uploading files

Control allowing file browsing and uploading

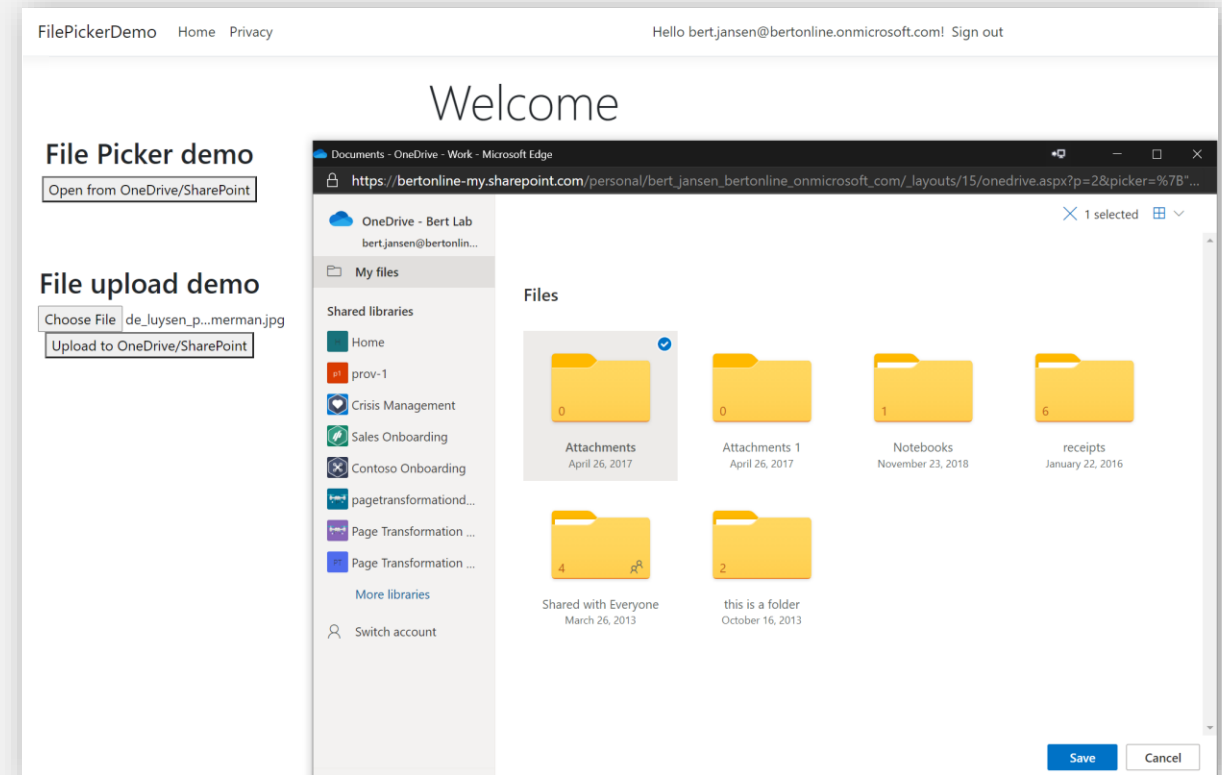

File Save mode: file upload via direct upload or upload location id's (for API access)

Implementation:

JavaScript library: <https://js.live.net/v7.2/OneDrive.js>

Resources

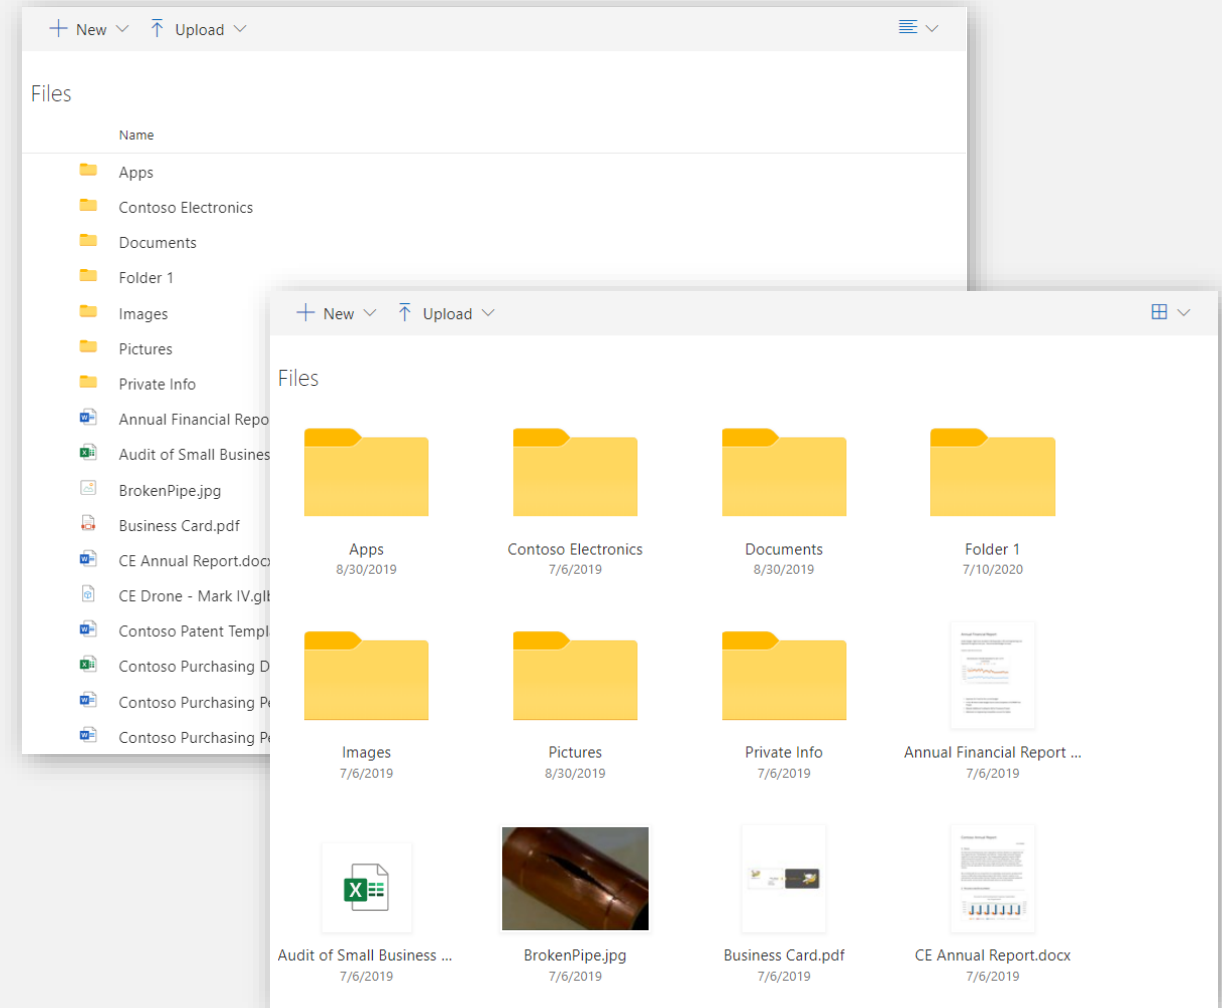

[Saving files documentation](#)

A new picker experience is in progress

Browsing files

Embed a browsing control in your application that works similar as the browsing files in Microsoft's products like Office, SharePoint and Teams

Coming to preview soon!

Viewing, selecting
and uploading files

Deep integration
via API's

Owning my
file types

Single source for personal and corporate data

Files (drive/drive item) represents an item within a drive, like a document, photo, video, or folder

`/v1.0/me/drive`
`/v1.0/sites/{id}/drives`
`/v1.0/sites/{id}/drive/items/{id}`
`/v1.0/groups/{id}/drive`

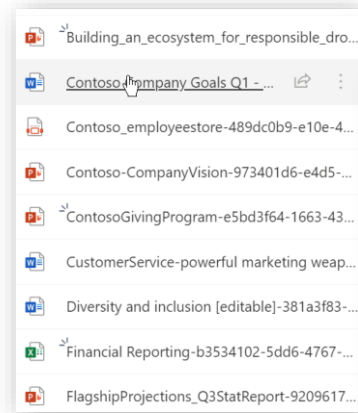

Microsoft Graph

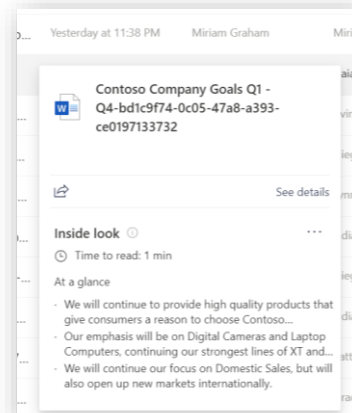

Use in a file picker

Native file viewing

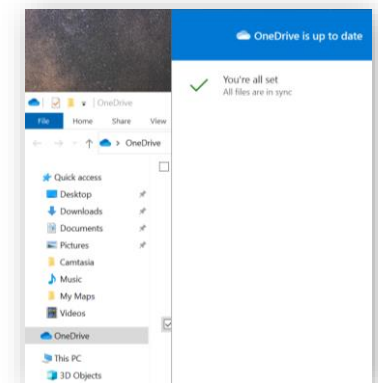

Integrated search Exp.

Doc gen & save

Native file syncing

Basic Microsoft Graph elements

Sites – Contains lists, drives, and subsites

/v1.0/sites/{site-id}

Drive – Contains files and folders

DriveItem – A file or folder that is in a drive

/v1.0/sites/{siteId}/drive/items/{item-Id}

File previews

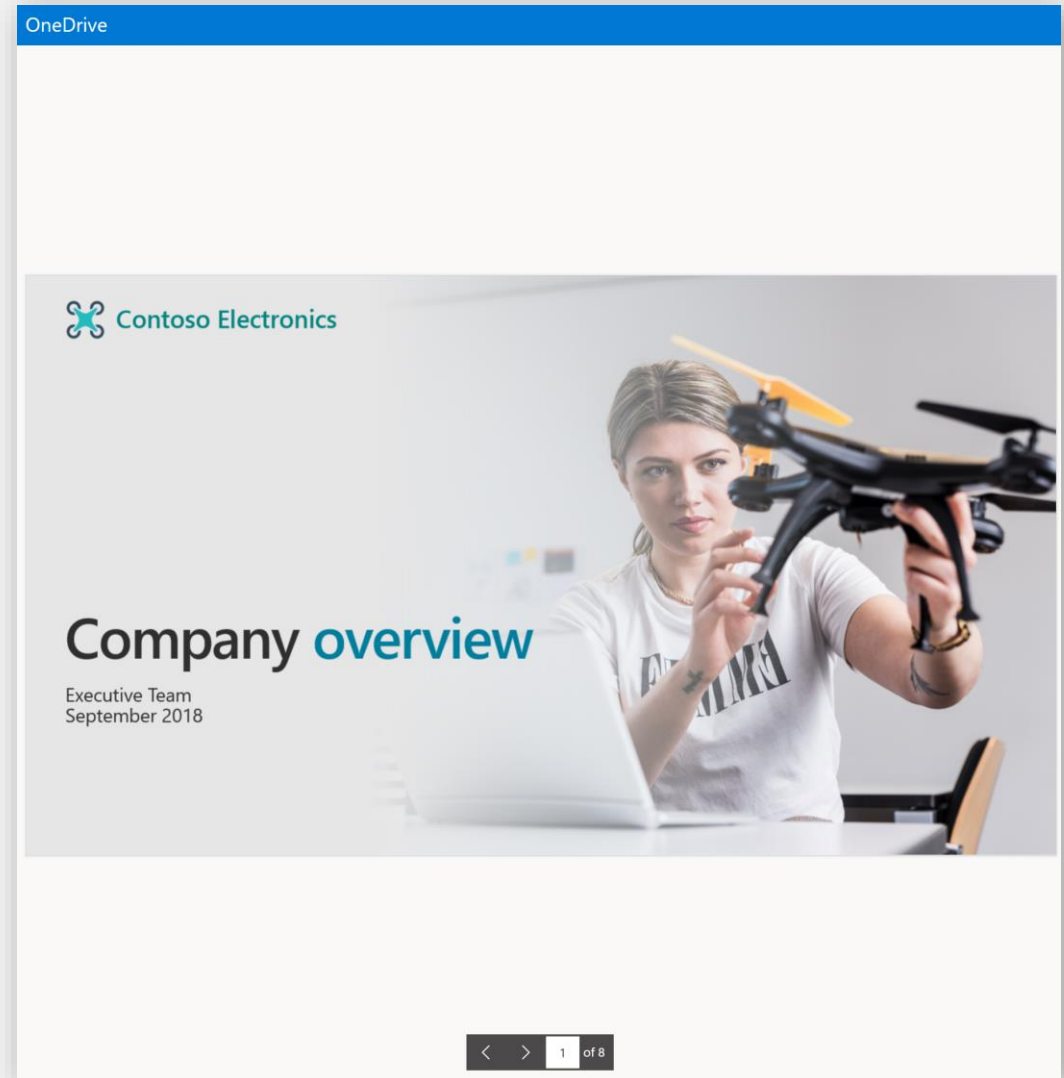

Graph API to get previews
of [320+ file types](#)

- v1.0/me/drive/items/{id}/preview
- v1.0/sites/root/drives/{drive-id}/items/{id}/preview

```
{
  "@odata.context": "https://graph.microsoft.com/v1.0/$metadata#microsoft.graph.itemPreviewInfo",
  "getUri": "https://bertonline.sharepoint.com/_layouts/15/embed.aspx?uniqueId=af3dde1a-f7af-4bde-",
  "postParameters": null,
  "postUri": null
}
```

Resources

[File documentation](#)

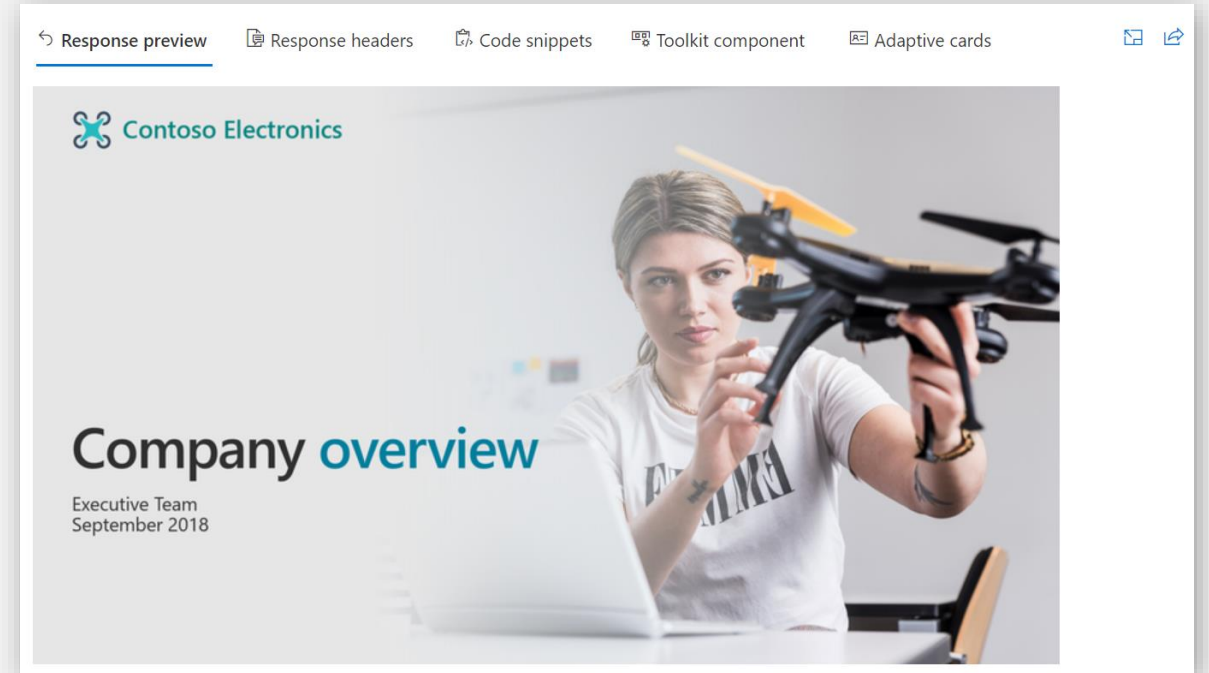

File thumbnails

Graph API to get thumbnails
of [320+ file types](#)

- v1.0/me/drive/items/{id}/thumbnails/0/large/content
- v1.0/sites/root/drives/{driveid}/items/{id}/thumbnails/0/large/content

Resources

[File thumbnails documentation](#)

Subscriptions and delta queries

Microsoft Graph based web hooks that you can use to be notified of events

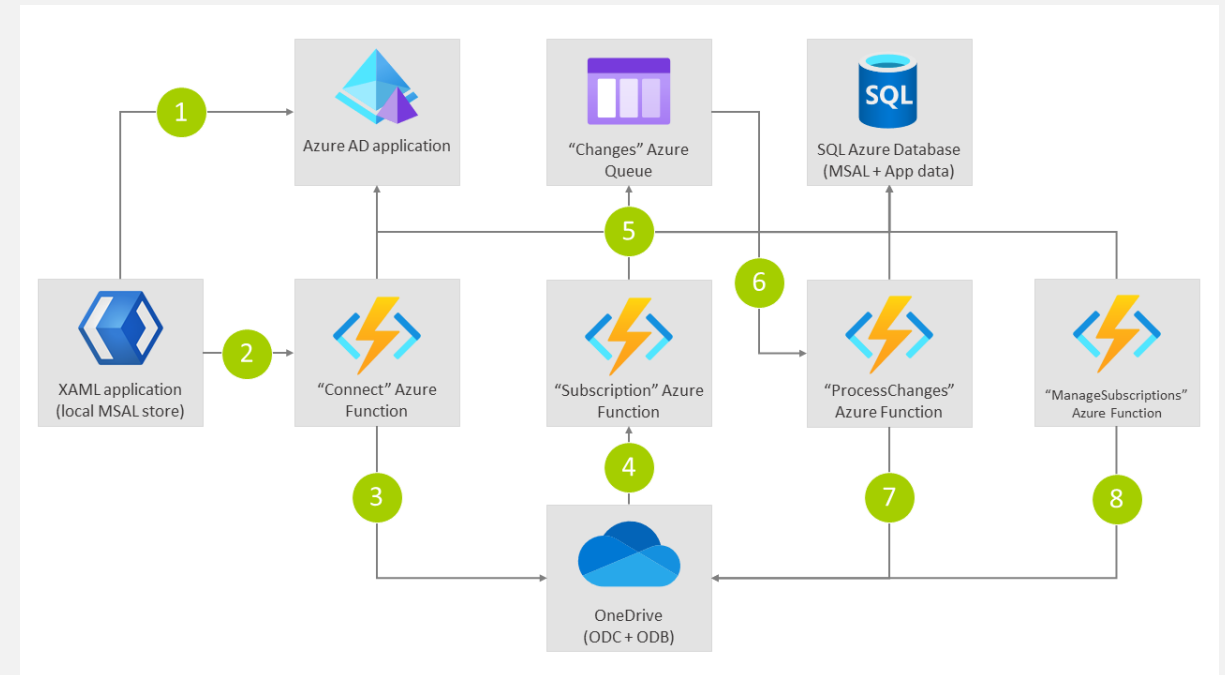

Delta queries to just get the changes since last time

Resources

[Subscription's documentation](#)

[Delta query documentation](#)

[OneDrive files integration sample \(.NET\)](#)

Scan guidance

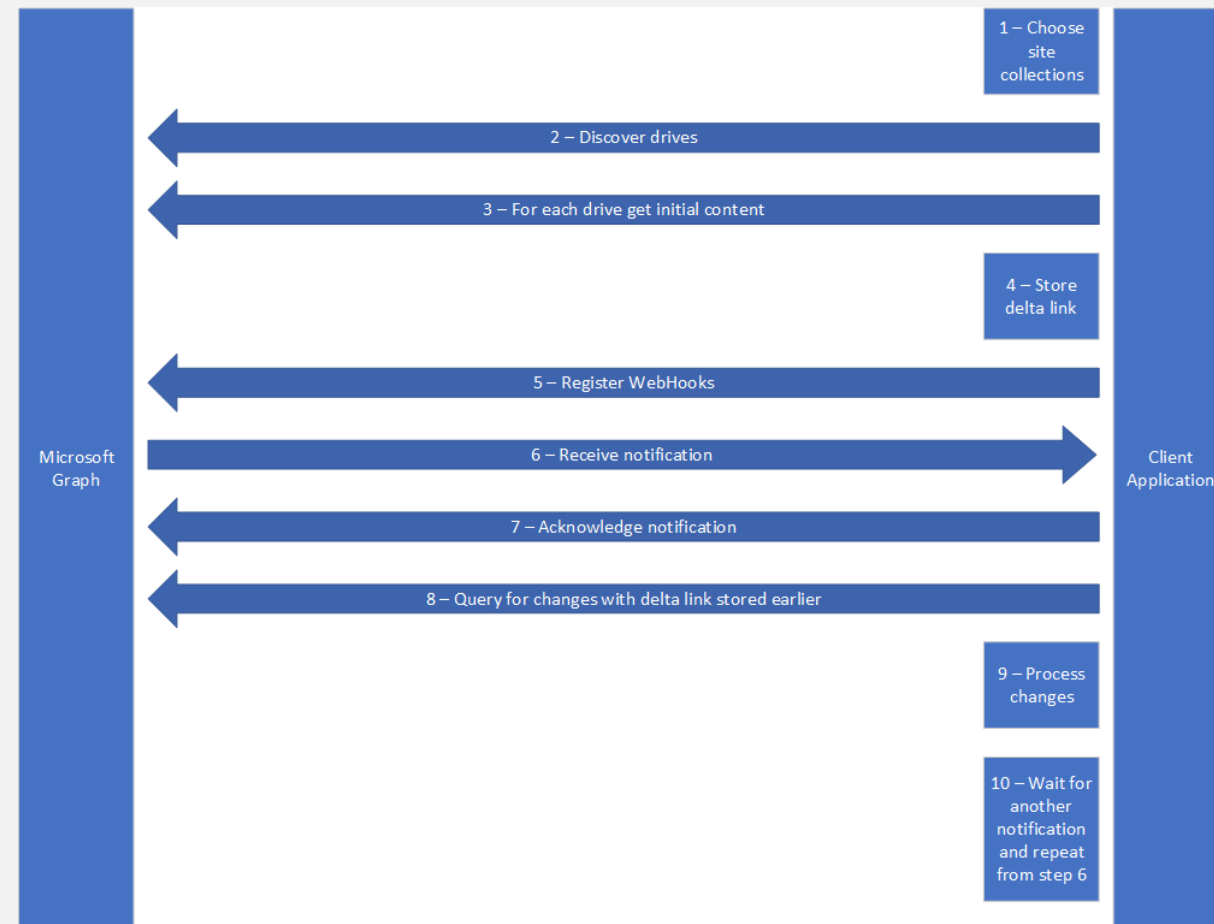

Best practices for discovering files and detecting changes at scale

Continuously crawling all SharePoint content is not recommended, being notified of changes is a much better pattern

Resources

[Scan guidance documentation](#)

[Delta query documentation](#)

Viewing, selecting
and uploading files

Deep integration
via API's

Owning my
file types

File handlers

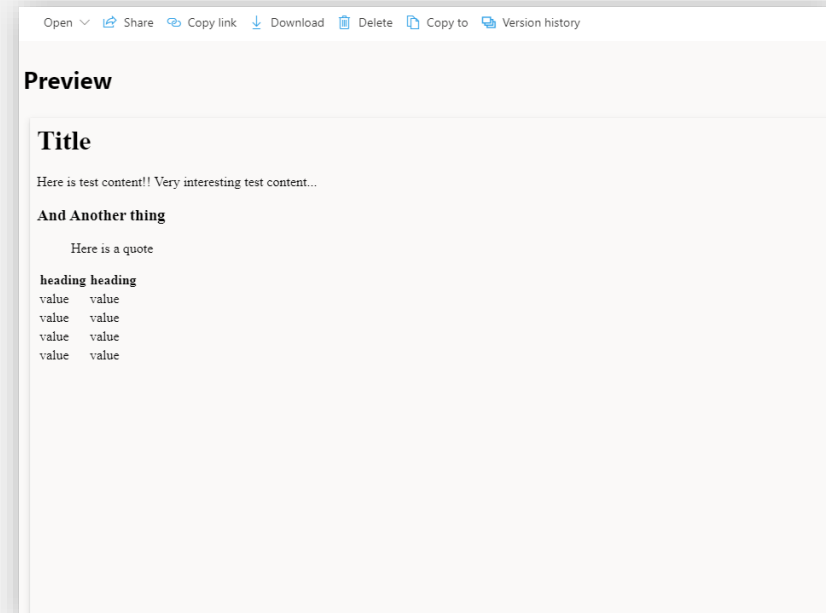

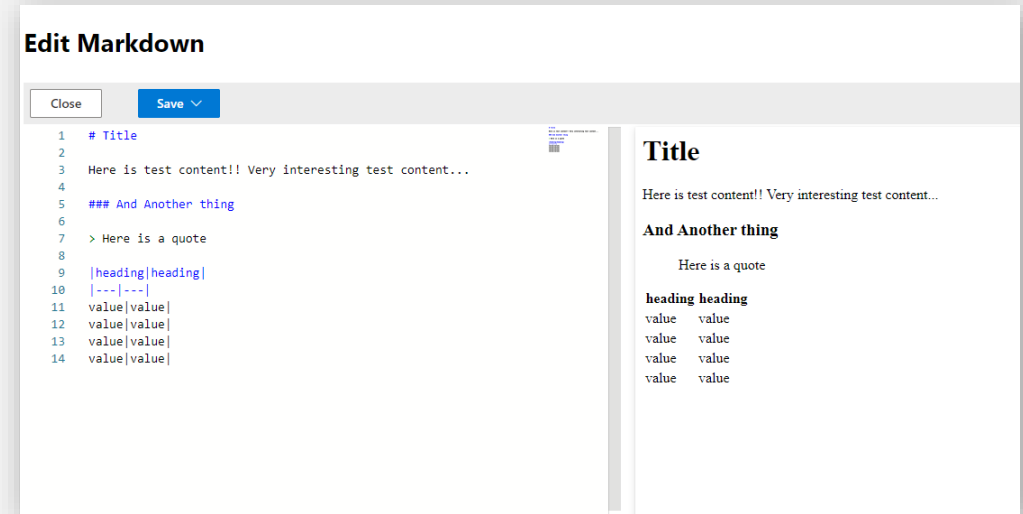

Enabling custom file experiences for your file types

- File preview
- Create new files in the browser
- Rich view/edit capability
- Custom actions that launch into your app
- Customized file icons

Resources

[File handlers documentation](#)

[Markdown sample file handler](#)

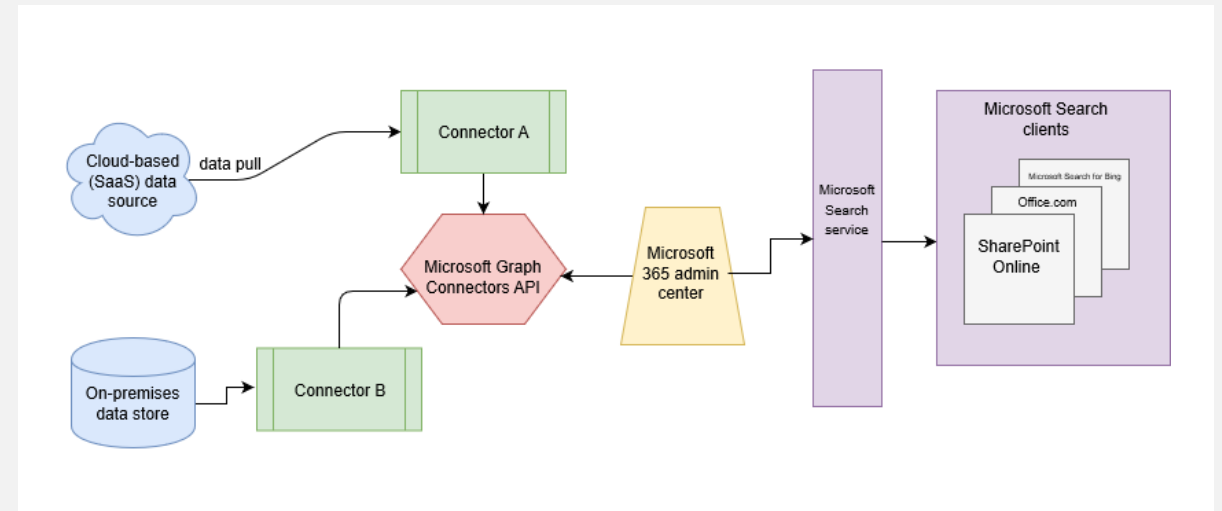

Graph connectors

Enables ISV/third party specific data to appear in Microsoft search results

- Index your file data
- 9 Microsoft built connectors – 100+ 3rd party connectors

Resources

[Microsoft Graph connectors gallery](#)
[Graph connector dotnet sample](#)

List extensibility scenarios

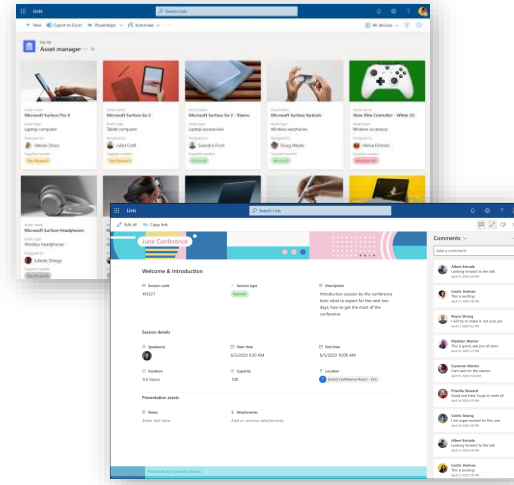

An overview of the extensibility options when working with lists in SharePoint

Empowering business processes via Lists

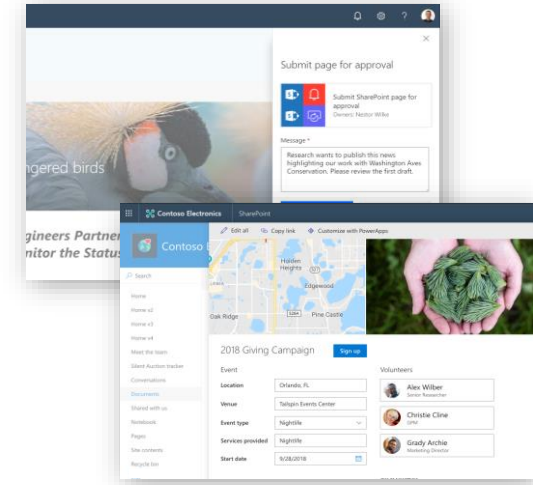

Native efficiency

Collect, manage, and distribute content and data using SharePoint lists and libraries

Simple configuration

Lists are the best way to organize the things your team cares about & must get done.

Integrated solutions

Compose analytics, user experiences, and business processes using an integrated set of services from Microsoft.

Continuum

Track what matters most with Microsoft Lists

Simple

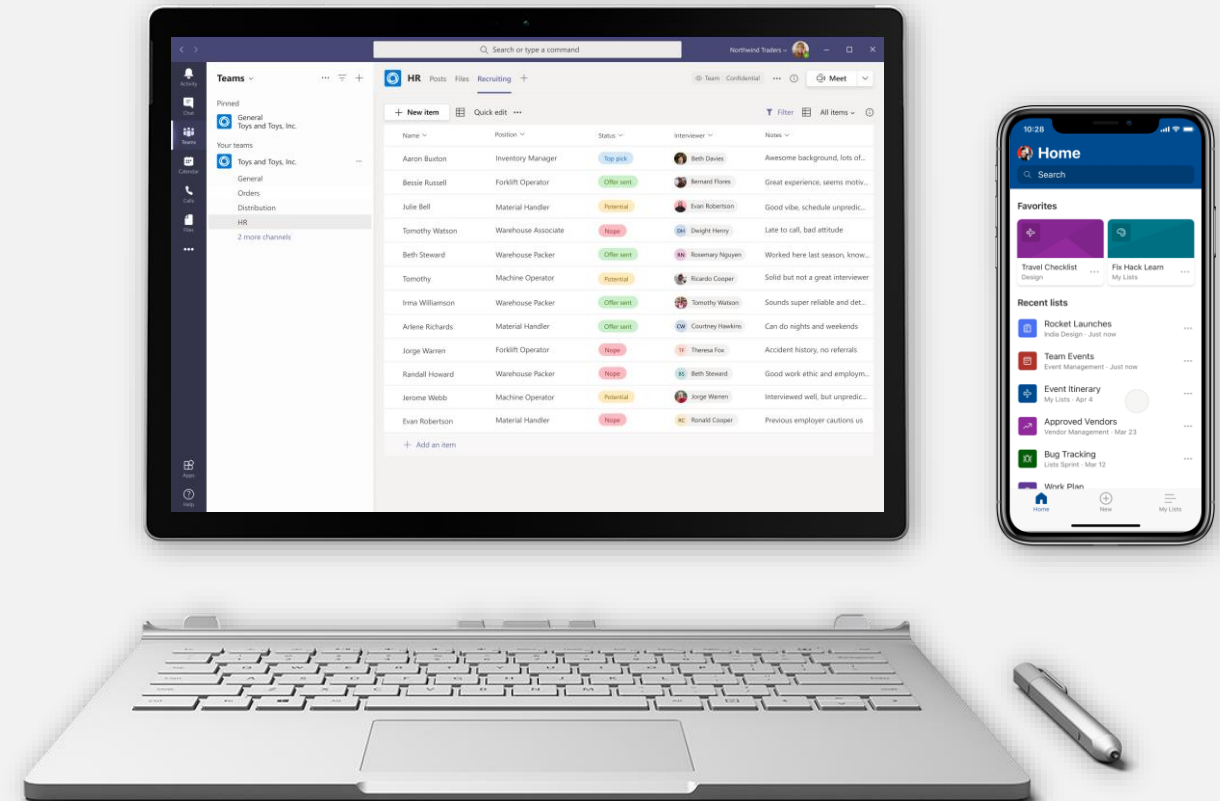

Easily create, share, and track lists with anyone, on any device

Smart

Keep everyone in sync with rules and quick edits

Flexible

Customize your lists for whatever your business needs

Simple
configuration

Business process
automation

Deep integration
via API's

List formatting: Columns

Use JSON to control how a column is displayed

- Out of the box designers available for power users
- Include formatting when you provision lists

Resources

[Column formatting documentation](#)

[List formatting samples](#)

For more advanced scenarios involving custom code, checkout [SPFX Field Customizers](#)

Title ▾	Effort (Days) ▾	Assigned To ▾	Status ▾
Herd Cats	7	Sadettin Dogan	In Progress
Book fancy dinner for the team	4	Hanne Peterson	Done
Lock down demo environment	10	Chinh Phan	Blocked
Book flights	1	Miroslava Polakovicova	In Review

Title ▾	Effort (Days) ▾	Assigned To ▾	Status ▾
Herd Cats	7	Sadettin Dogan	→ In Progress
Book fancy dinner for the team	4	Hanne Peterson	✓ Done
Lock down demo environment	10	Chinh Phan	⊗ Blocked
Book flights	1	Miroslava Polakovicova	⚠ In Review

List formatting: Views

Use JSON to control how a view is presented

- Out of the box designers available for power users
- Include formatting when you provision lists

Simple
configuration

Business process
automation

Deep integration
via API's

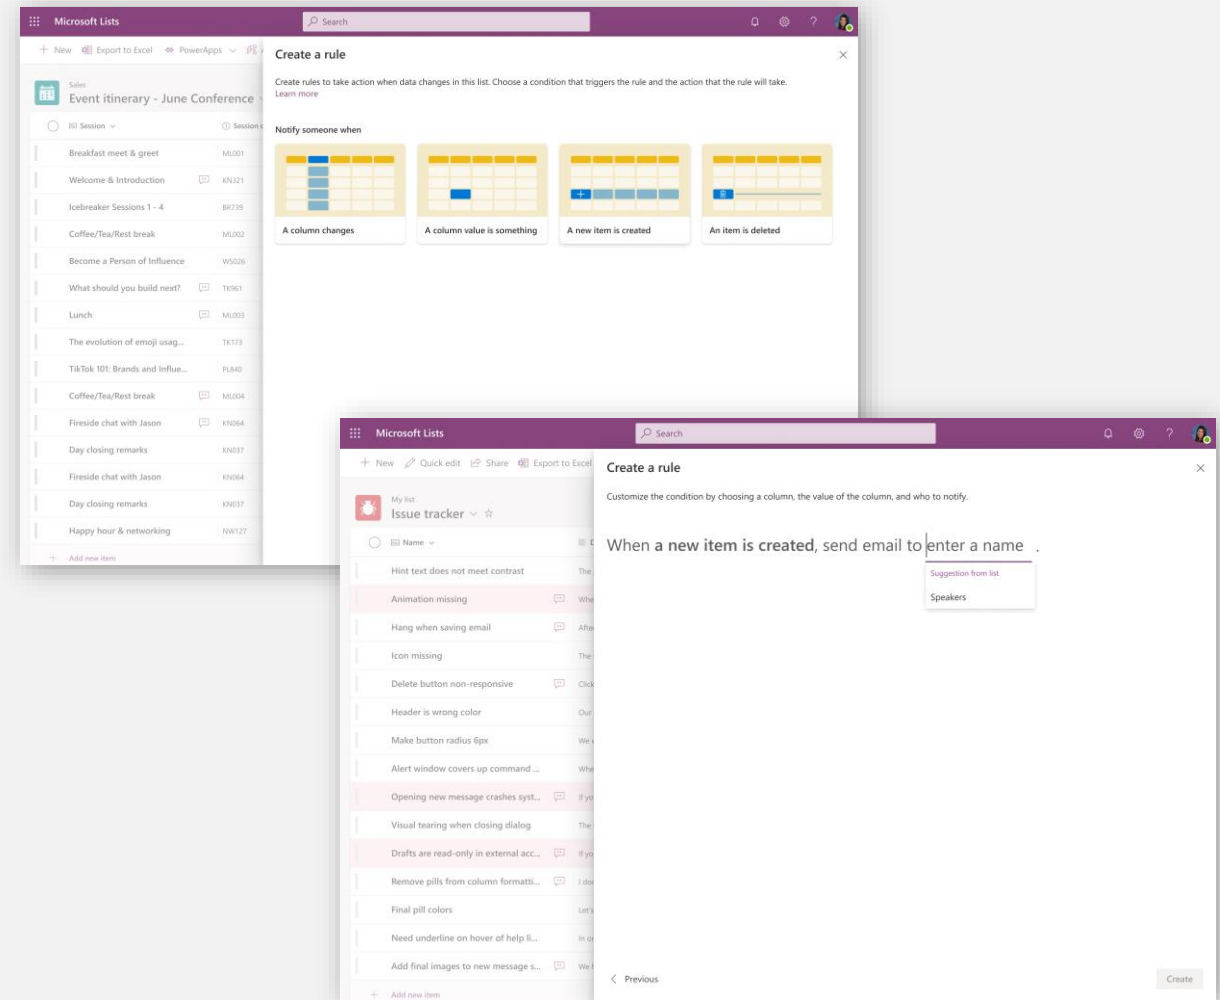

List rules

Trigger a notification based upon rules.
Notify someone when:

- A column changes
- A column value changes
- A new item is created
- An item is deleted

Resources

[Microsoft Lists Resource Center](#)
[Create a rule to automate a list](#)

Power Automate integration

Enable business processes on top of lists & libraries via the SharePoint Connector

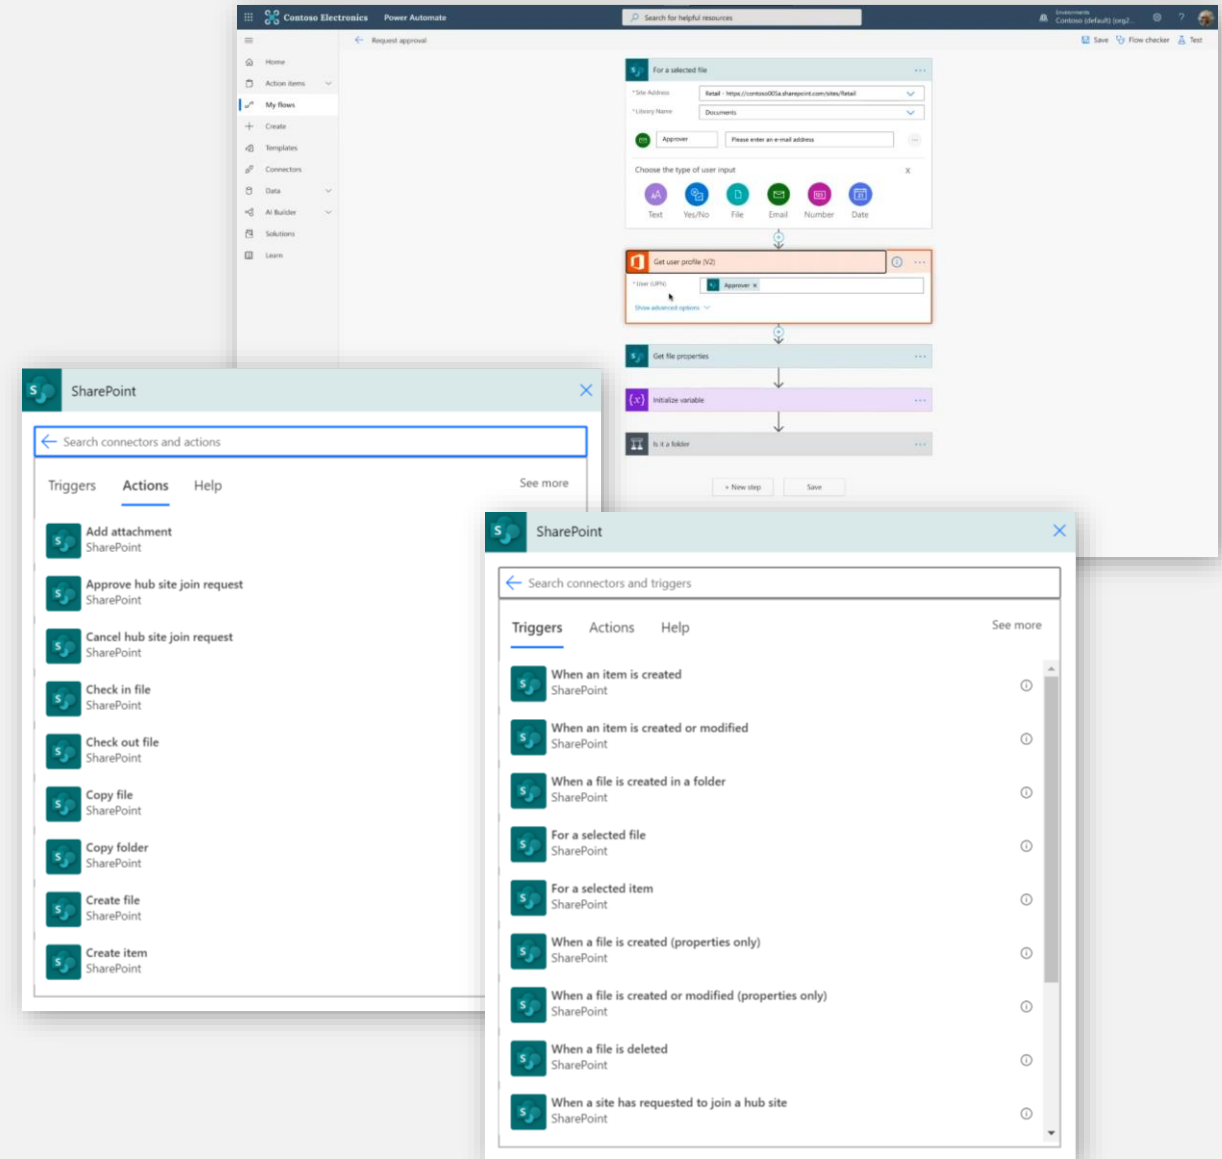

- Reminders on date columns
- Sign-off, content and page approvals
- Your custom business process

Resources

via API's

Basic Microsoft Graph elements

Sites – Contains lists, drives, and subsites

`/v1.0/sites/{site-id}`

List – Contains items, column definitions and content types

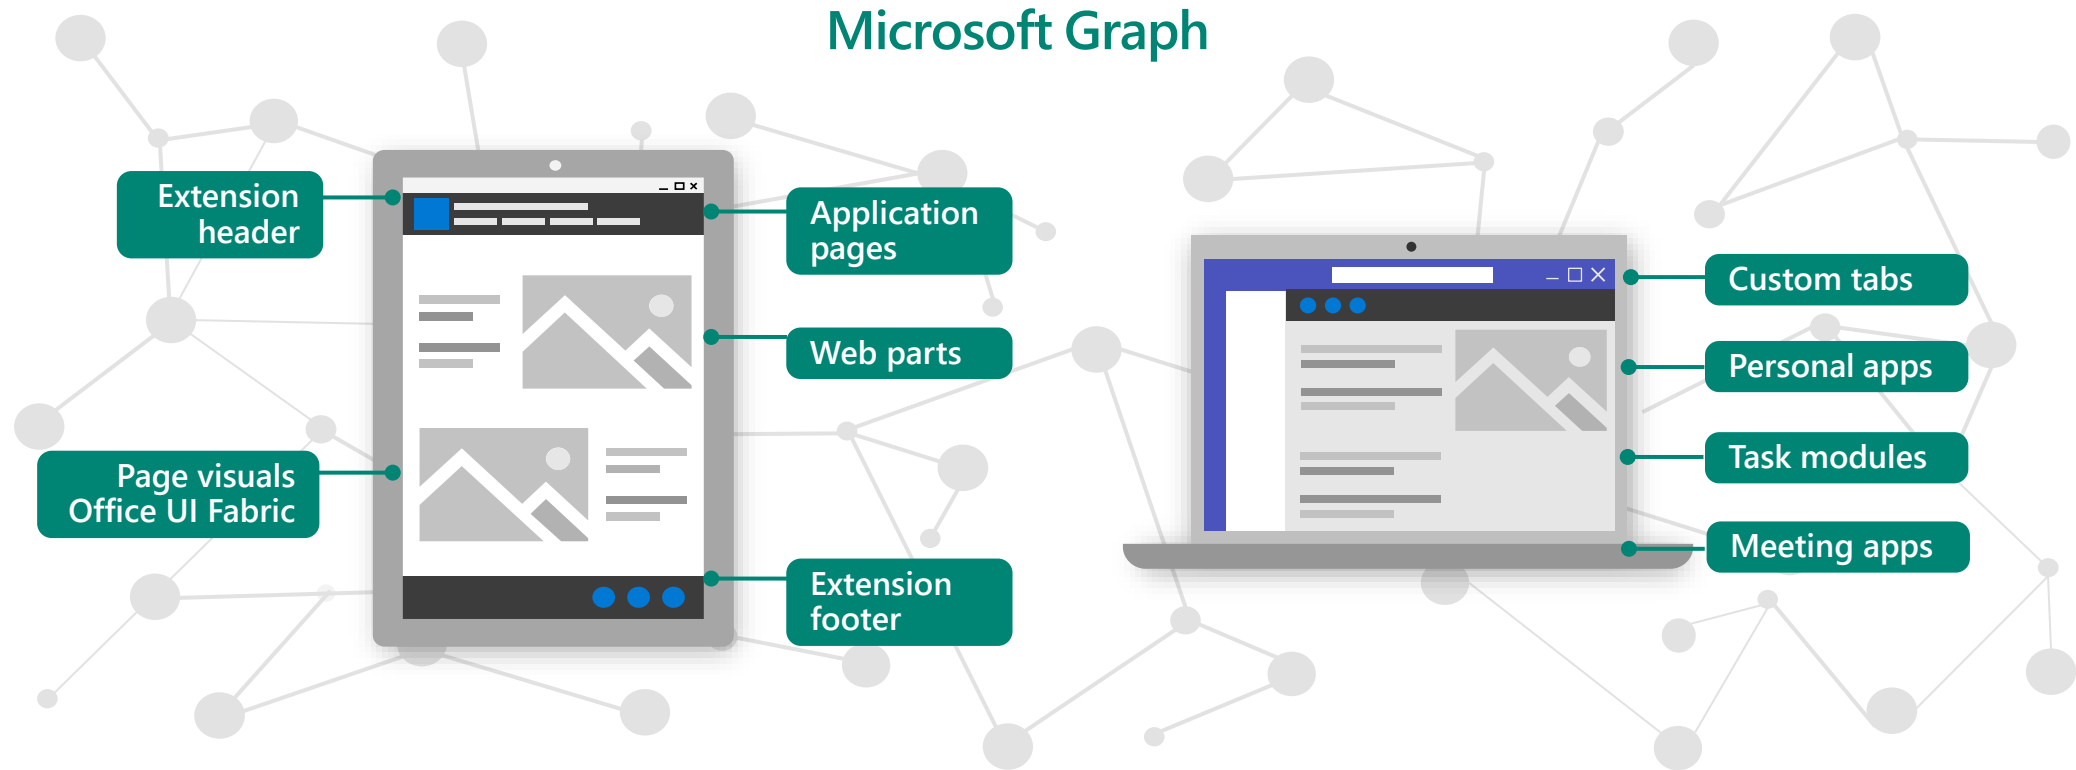

ListItem – The item data for the item in a list

`/v1.0/sites/{site-id}/lists/{list-id}/items/{item-id}`

SharePoint Framework

Using SharePoint Framework (SPFx) to extend
and enrich the SharePoint and Microsoft Teams user experience

What is SharePoint Framework?

"An application framework used to build and extend modern experiences in SharePoint and in Microsoft Teams"

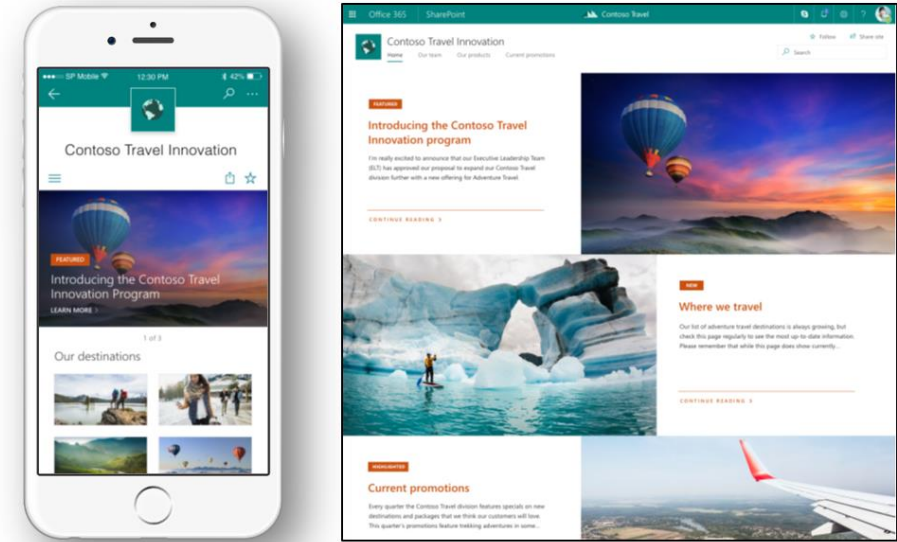

SPFx was publicly announced May 4th, 2016

SharePoint Framework (SPFx)

- Modern client-side development
- Lightweight web and mobile
- Powers our own experiences
- Backward compatible
- Supports open-source tools and JavaScript web frameworks

Resources

[SharePoint Framework Tutorials](#)

SharePoint Framework

Microsoft Graph

LOB Systems
and Cloud Services

Web parts

Controls that appear inside a SharePoint page and execute client-side in the browser

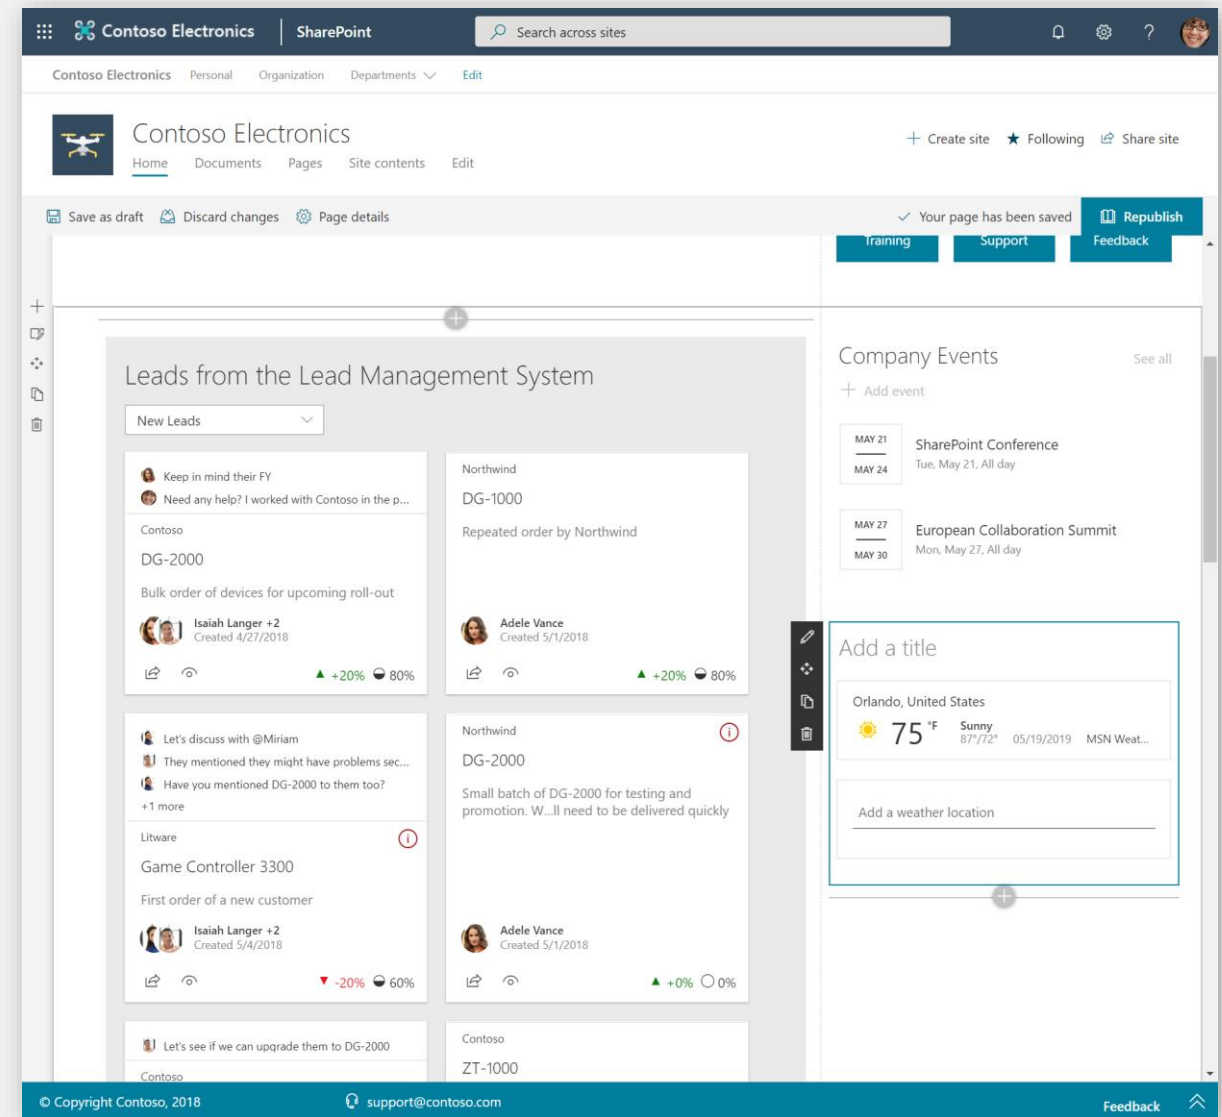

Resources

[SharePoint Framework documentation](#)

[Develop web parts with the SharePoint Framework](#)

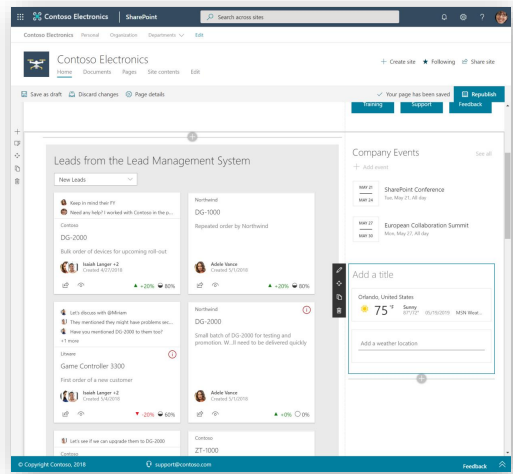

[SharePoint Framework \(SPFx\) Web Part Samples](#)

[Microsoft Teams development samples \(includes SPFx web parts\)](#)

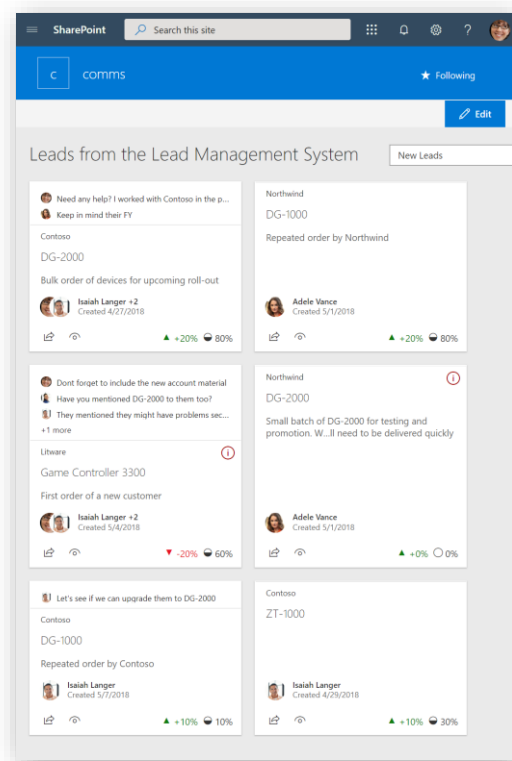

Use web parts across services

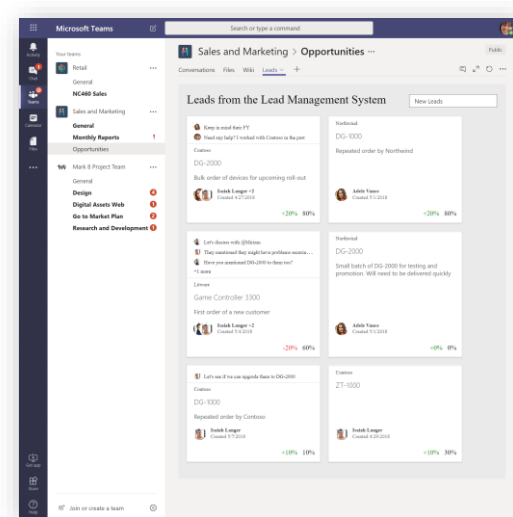

Web parts

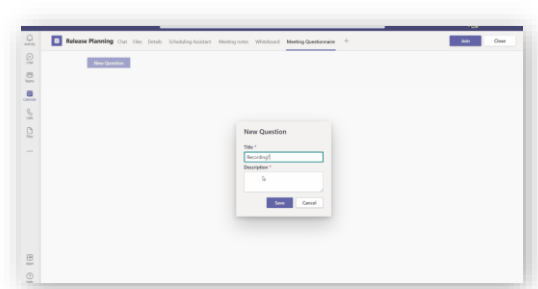

App pages

Teams tabs Personal Teams apps

Teams meeting apps

Application customizers

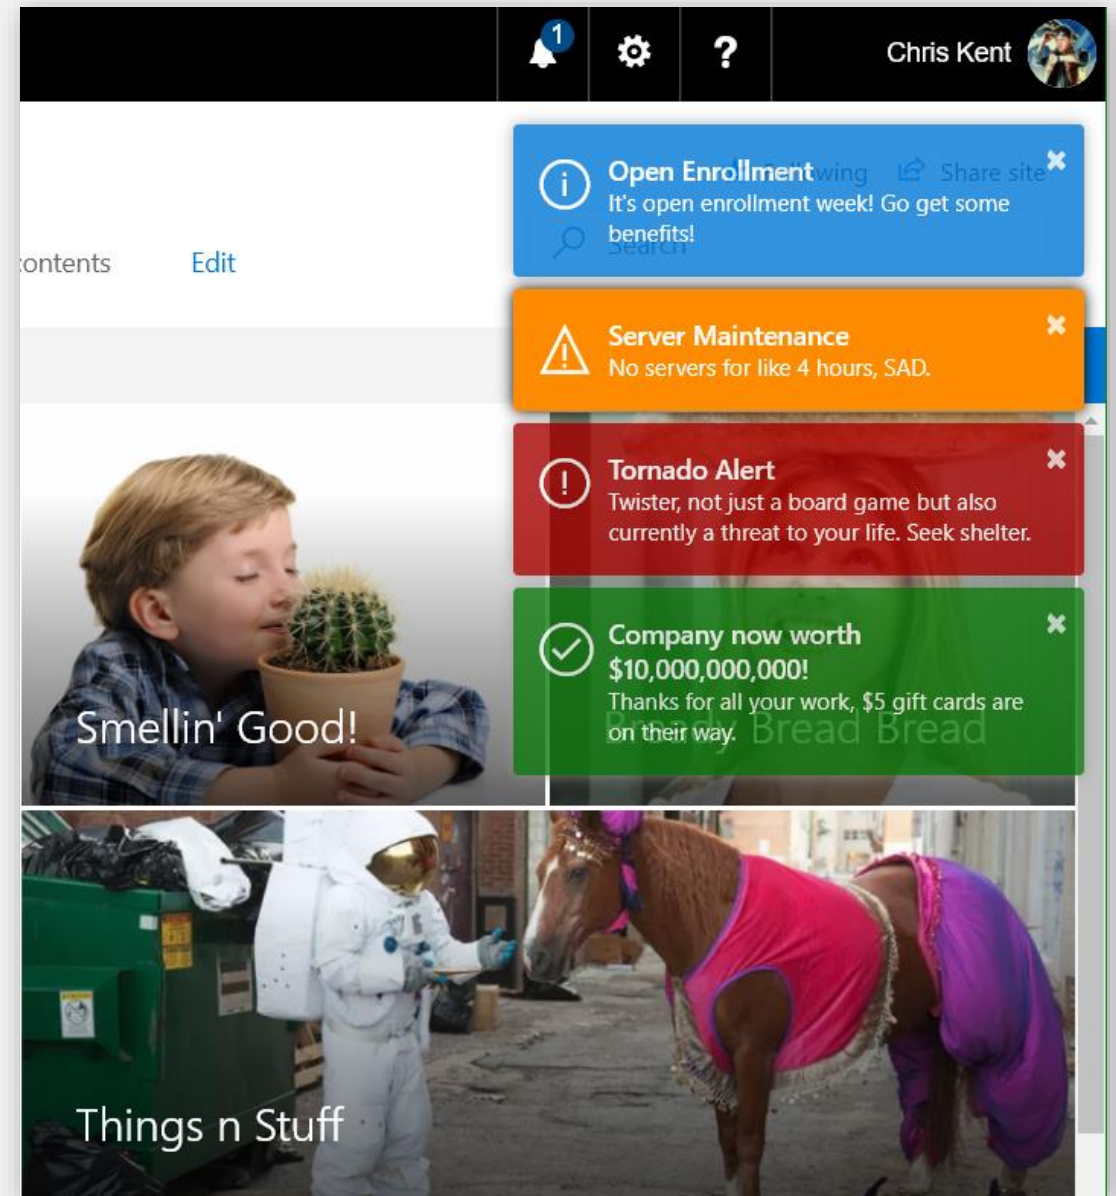

Adds scripts to the page, and accesses well-known HTML element placeholders and extends them with custom renderings

Resources

[SharePoint Framework documentation](#)

[Extend the SharePoint user interface with SPFX extensions](#)

[SharePoint Framework \(SPFx\) Extensions Samples](#)

Field customizers

Provides modified views to data for fields within a list

Resources

[SharePoint Framework documentation](#)

[Extend the SharePoint user interface with SPFX extensions](#)

[SharePoint Framework \(SPFx\) Extensions Samples](#)

The image shows a user interface for a field customizer. At the top, there is a header bar with the text "Percent" followed by a downward arrow icon and a plus sign icon. Below this header, there are three horizontal sliders, each with a circular handle and a numerical value to its right. The first slider has a value of 30, the second has a value of 74, and the third has a value of 70. The sliders are arranged vertically and are separated by thin horizontal lines.

Slider Value
30
74
70

Command sets

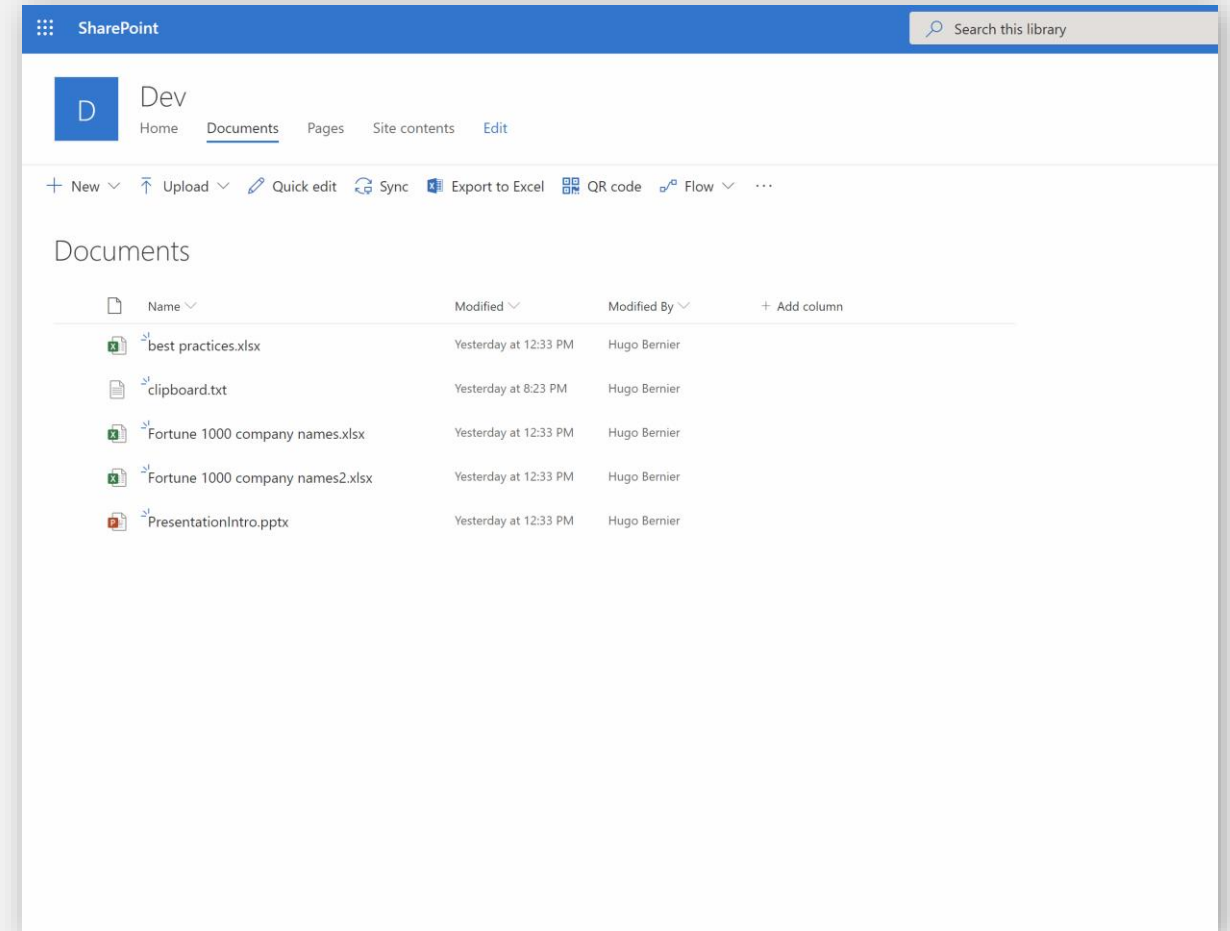

Extends the SharePoint command surfaces to add new actions, and provides client-side code that you can use to implement behaviors

Resources

[SharePoint Framework documentation](#)

Search Query extension

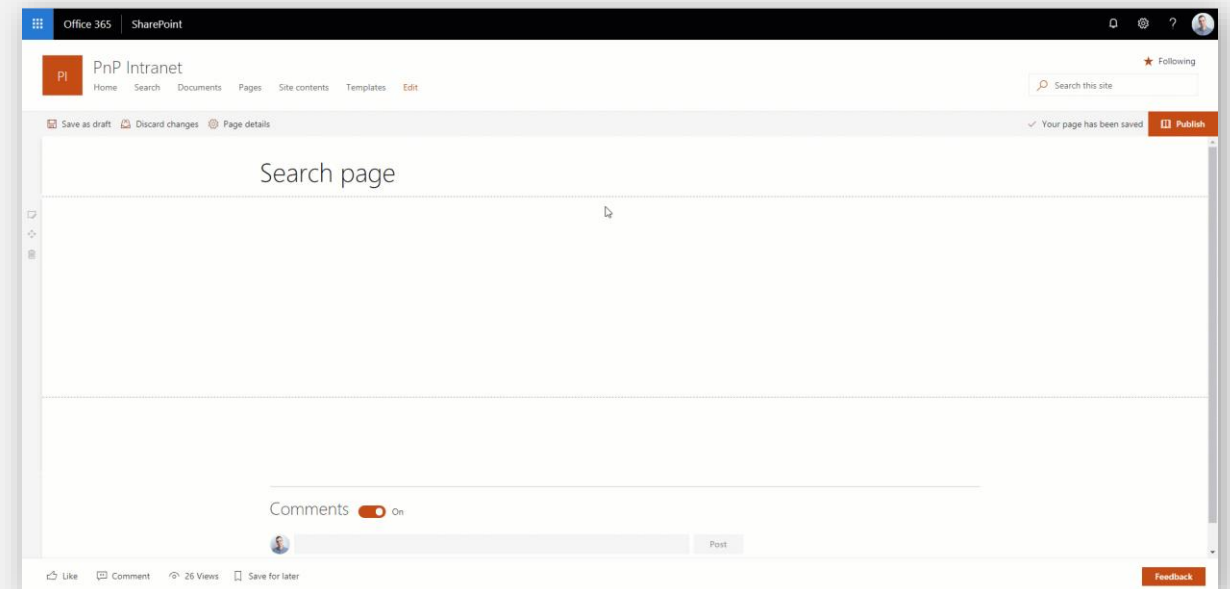

Allows you to manipulate the user's search query before it is sent to SharePoint

Resources

[SharePoint Framework documentation](#)

[PnP Modern Search](#)

[Getting started with Search Query extensions](#)

Library components

The library component type in the SharePoint Framework (SPFx) enables you to have independently versioned and deployed code served automatically for your SharePoint Framework components

Resources

[SharePoint Framework documentation](#)

[SharePoint Framework Library component overview](#)

[SharePoint Framework Library samples](#)

How to create a third-party SPFx library

1. Create a new project directory in your favorite location

```
Console
md corporate-library
```

2. Go to the project directory

```
Console
cd corporate-library
```

3. Create a new library by running the Yeoman SharePoint Generator

```
Console
yo @microsoft/sharepoint
```

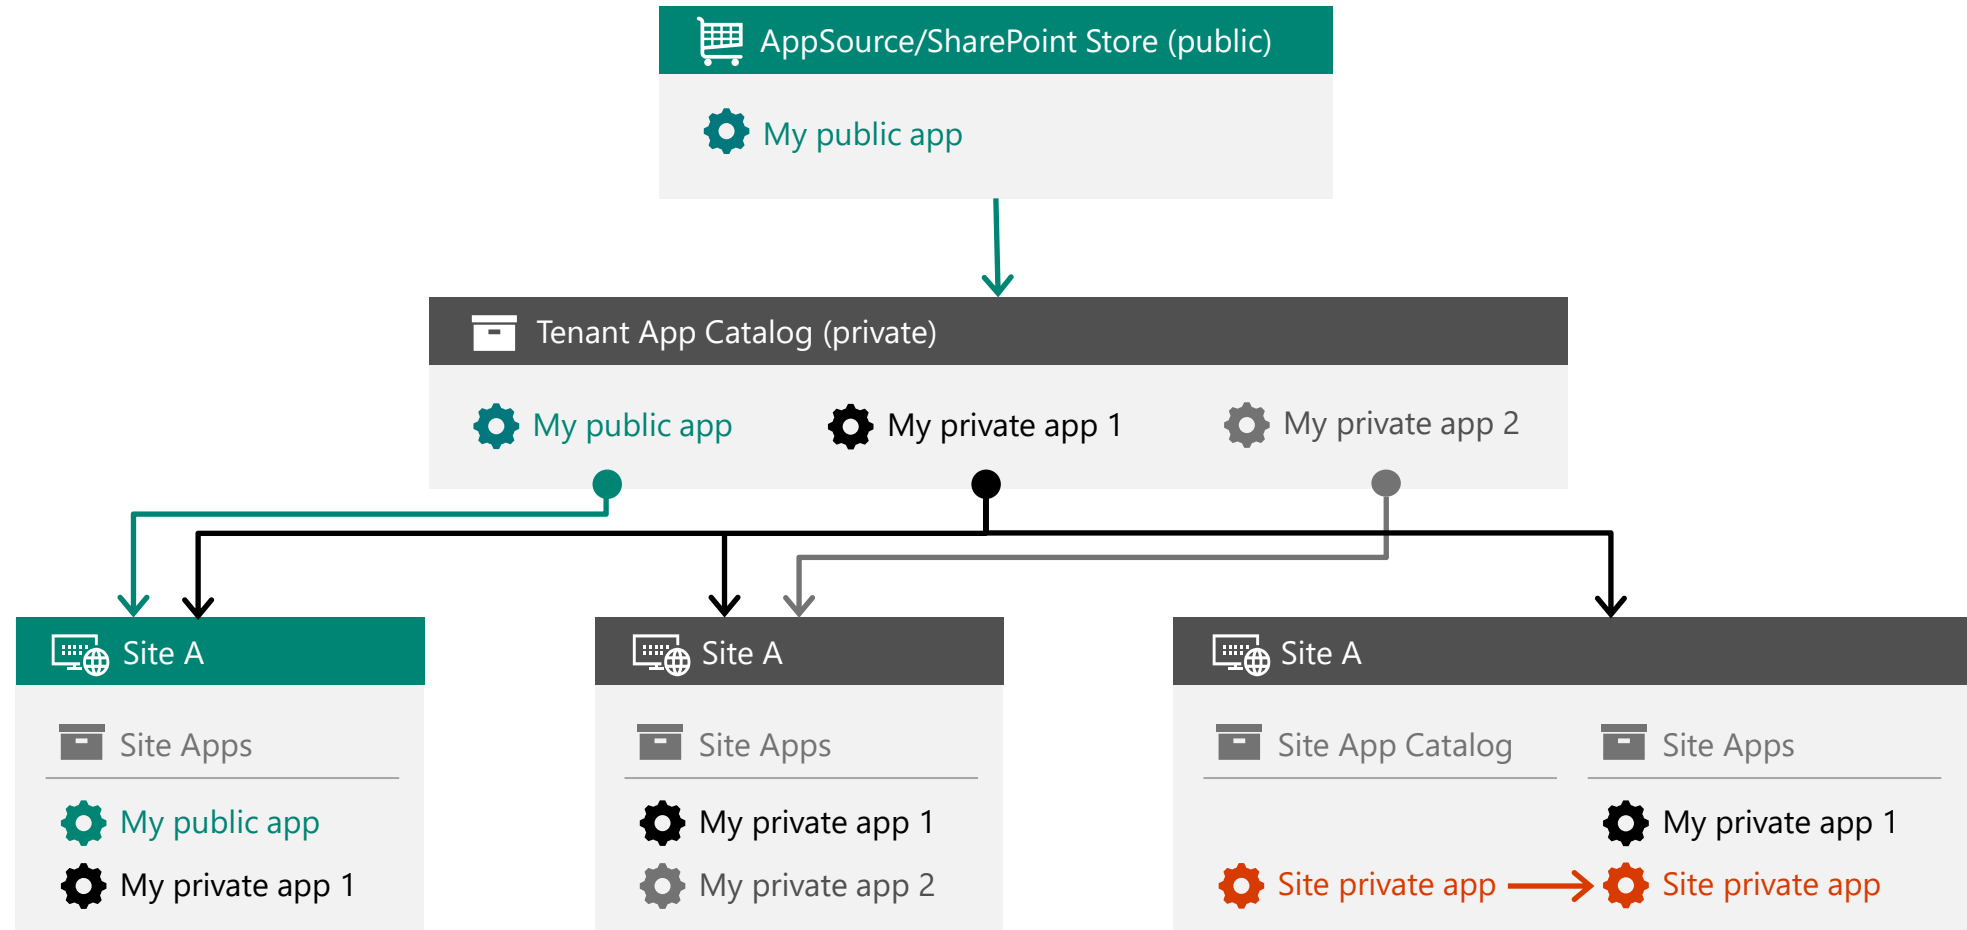

4. When prompted, enter the following values (*select the default option for all prompts omitted below*):

- Do you want to allow the tenant admin the choice of being able to deploy the solution to all sites immediately without running any feature deployment or adding apps in sites?: Yes
- Which type of client-side component to create?: Library
- What is your Library name?: CorporateLibrary
- What is your Library description?: CorporateLibrary description

Deployment and configuration

Take control over how users create sites, make your apps available to the SharePoint users

App deployment options

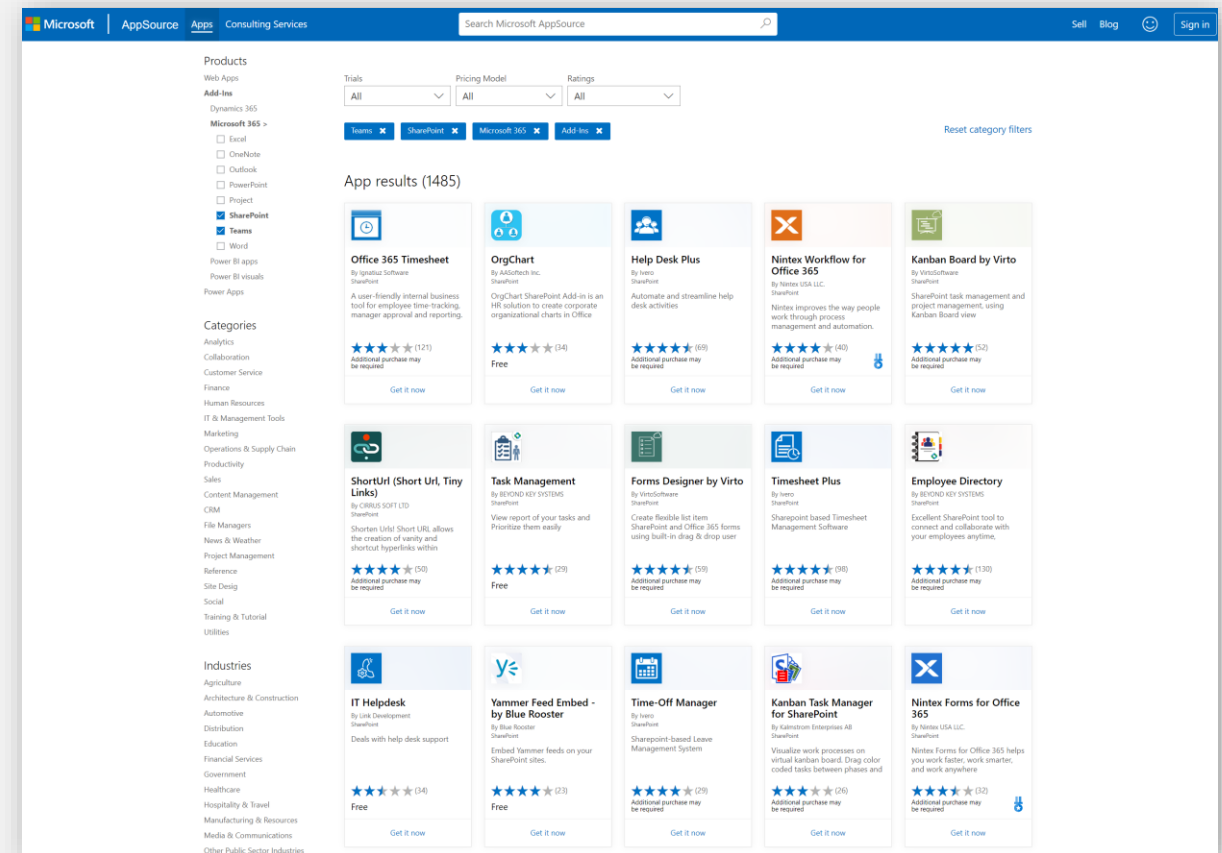

App source

Public store for SharePoint, Teams and Office apps

Resources

[App source documentation](#)

[Microsoft App Source](#)

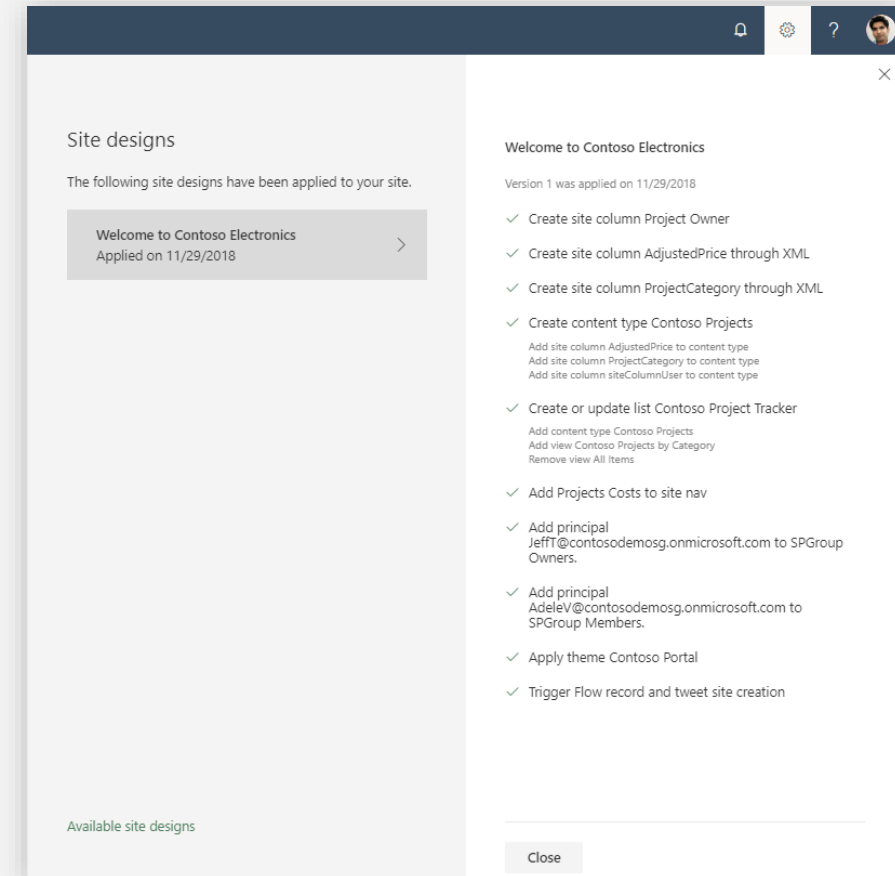

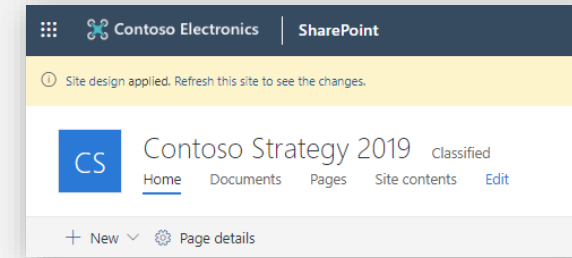

Site designs and site scripts

Automate SharePoint provisioning to new or existing SharePoint

- Create SharePoint artefacts such as lists, libraries, content types
- Update navigation and apply branding
- Configure security
- Deploy apps
- Trigger Power Automate for custom coded provisioning tasks

Resources

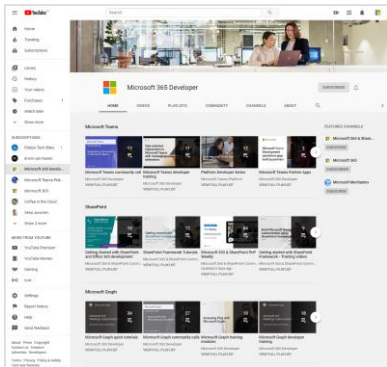

[Site design and site scripts documentation](#)

Open source software

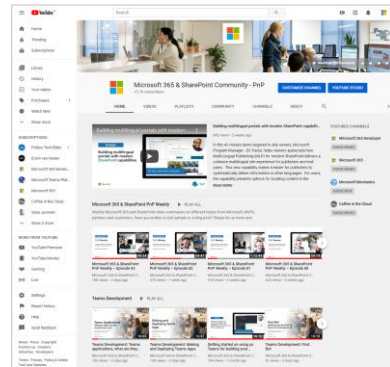

There's a very vibrant community of Microsoft developers building open source for SharePoint, OneDrive and Microsoft Graph
